## **Abstracts**

Antibody Drug Conjugates are the fastest growing class of oncology therapeutics. These are monoclonal antibody based therapies which have achieved great success in the field of cancer treatment, primarily when used with cytotoxic drugs. ADC is a class of therapeutics which harnesses the antigen-selectivity of monoclonal antibodies to deliver the highly potent cytotoxic drugs to antigen expressing tumor cells. The use of monoclonal antibody directed delivery confers a therapeutic index to highly potent cytotoxic drugs, increasing both the efficacy and safety of therapy. Such novel anti-cancer drugs are being used these days to target cancers, while minimizing the exposure of healthy tissue. The recent approval of four ADCs in the global market and a strong pipeline of such drugs, highlight the potential for new therapeutic innovations in this industry.

According to the RNCOS report entitled “Global Antibody Drug Conjugate Drug Sales, Pipeline Analysis (By Phase, Linker, Technology, and Indication) & Market Forecast to 2023”, the Global Antibody Drug Conjugates Market is anticipated to witness a double digit growth during 2017-2023. The report provides information about the current and future market scenario of the Global ADCs Market.
