Abstracts

Immuno-oncology is a unique approach that uses the body's immune system to fight cancer. These therapies activate an individual's immune system, making it able to recognize cancer cells and destroy them. Immuno-oncology therapies provide long lasting anti-cancer benefits to patients who previously had very few treatment options available to them. These therapies work against a large number of cancer types. The technological advancements are helping the growth of immuno-oncology market. The biotechnology and pharmaceutical companies are striving to launch new and most effective therapies.

According to the report "Immuno-Oncology Market, By Type [mAb (Naked, Conjugate), Cancer Vaccines, Immune Checkpoint Inhibitors (PD-1, PD-L1, CTLA-4)], By Application (Lung, Melanoma, Leukemia, Lymphoma) - Global Forecast to 2024", the global immuno-oncology market is anticipated to reach US\$ 135 Billion by 2024.
