Telecom industry in India has undergone a revolution during the past few years with tremendous growth in the telecom subscriber base. Additionally, the country's telecom industry is one of the fastest growing and one of the largest telecommunication networks in the world. With the ongoing investments into infrastructure deployment, the country is projected to witness high penetration of Internet, broadband, and mobile subscribers in near future.

According to our new analytical study on the sector "Indian Telecom Analysis (2008-2012)", mobile telephony continues to fuel growth in the Indian telecom sector with mobile subscriber base projected to grow at a CAGR of around 6.6% during 2011-12 - 2014-15. Other segments of the industry, like Internet are also anticipated to witness strong growth in terms of both subscriber addition and network infrastructure deployment during the forecast period. Moreover, with the launch of 3G services, the country is expected to witness rapid surge in the broadband subscribers' base during the coming years.

Tele-density in India has significantly improved during the past few years and has covered large portion of the country's population owing to the improving network infrastructure. Further, launch of advanced telecom services, such as 3G and IPTV will also drive growth in the Indian telecom subscriber base during the forecast period. Moreover, mobile handset market is expected to register robust growth in near future. In this regard, our report provides rational analysis of the factors, which are driving the growth of mobile handset market in India. Additionally, various factors driving the overall telecom market have been thoroughly analyzed in the report.
