Despite the global economic financial turmoil, the US retirement market picked up strong pace of growth in 2010, and is also expected to accelerate further in the coming years. This is due to the fact that, Americans are increasingly becoming conscious about their income sources in their old-age. Further, factors, such as rising life expectancy, increase in old age population, and declining mortality rate are resulting into high demand for pension plans in the United States, says our new research report “US Retirement Income Market Analysis”.

Further, the industry is expected to secure growth by catering to the needs of the individuals in the country. The industry aims at targeting an increased share of the customer pocket through the expansion of innovative products combined with deeper penetration by expanding its reach across different regions. The industry requires incorporating products, which yield maximum returns with low level of risk. By building investors trust and increased customer awareness, the industry can promote financial literacy in building greater participation in retirement solution market.

It has been observed that, Individual Retirement Accounts (IRA) and Defined Contribution (DC) accounts for the majority of retirement assets in the US and these are predicted to witness significant growth in future. Improving life expectancies and elderly population are the main driving factors of the retirement solutions markets in the US.

The report also analyzes factors critical to the success of the US retirement solution market. It has identified key players in the market and included their detail business description. Additionally, the report sheds light on the emerging market opportunities,

which are expected to decide the future of the US retirement solutions market.

The report, “US Retirement Income Market Analysis”, provides a detail analysis along with the current and future outlook of the retirement market and explores the market developments and potential.
