Abstracts

The immune system is the defense of human body against infections and other attacker. The immune system protects human body against the attacks of infectious organisms with the help of certain series of steps called the immune response. There are two types of immune system: specific and nonspecific. Specific immune system is the generation of antibodies against a particular attacker while nonspecific immunity is the very first response to an external infection. It should be remembered that nonspecific immunity consists of generation of a large amount of antibodies which are stored at the place from where most probably the attacker enters. Cont...
