Abstracts

Home energy management systems (HEMS) products are fostering an era of sustained household energy efficiency during a time when many countries are improving their electric grid infrastructure. Consumers, however, have been generally reluctant to purchase HEMS products to monitor and reduce their energy consumption and lower their monthly electric costs. Moreover, many electric utilities are less than eager to develop energy programs and incentives for customers to use HEMS products. HEMS products manufacturers, meanwhile, have been caught in the middle of fluctuating consumer demand and the recent volatility among competitive technology suppliers. The HEMS products development landscape, SBI Energy believes, will likely flourish through 2020 as many niche suppliers of products in communications infrastructure, smart metering, and in-home energy interfaces begin to establish a stronger presence in the marketplace.
