Abstracts

The vigorous development of the global electronic information industry created a promising prospect for the upstream electronic component industry. The takeoff and the rapid growth of automobile electronics, smart phones, laptops and set-top boxes enabled the development of the electronic component industry. Among telecommunications products, mobile telecommunications, optical communications and telephones all need large quantities of components. In addition, strong demand also arises from computer and related products as well as consumer electronic products.

According to CRI, the past decade has seen the continuous rapid growth of China's electronics industry, driving the vigorous development of the electronic component industry. China has maintained its position as the world leader in terms of the production volume of varieties of electronic components. China's electronic component industry stands at an important position in the international market. China has become the global manufacturing base for electronic components such as amplifiers, aluminum electrolytic capacitors, cathode ray tubes, printed-circuit boards and discrete semiconductor devices.

CRI estimates that in 2016, the total production volume of electronic components in China was over 3 trillion, increasing over 2015.

New types of market demand have pushed electronic components to become smaller, chip-type, digital, smart and environmentally friendly. The future of China's electronic component industry is bright.

It is expected that from 2017 to 2021, the rapid development of mobile Internet, automobile electronics, new energy and VR industries will drive the growth of the

electronic component industry.

In this report, CRI analyzes 28 electronic component manufacturers listed in A-share market in China.

The report is composed of two parts: the first part is enterprise profiles and the second part is the operation status of these enterprises in the recent decade (presently 2006 to 2016, we will update it to the latest as time goes by).

The operation status is demonstrated from the following perspectives: (1) financial indexes, such as earnings per share, book value per share (BPS), sales per share, net cash flow per share, return on net worth and debt to asset ratio; (2) indexes on the income statement, such as revenue, operating profit, net profit and EBIT; (3) indexes on the income statement, such as revenue, operating profit, net profit and EBIT; (4) indexes on the balance sheet, such as liquid asset, fixed asset, current liability, non-current liability, capital reserve and shareholders' equity.
