Abstracts

Port bulk cargo handling equipment refers to special machinery and equipment used at port terminals to load, unload, store, transfer and transport bulk cargo and miscellaneous cargo. It is an important infrastructure of the port logistics system.

Commonly used equipment includes gantry cranes, shore cranes, mobile port cranes, forklifts, lifting equipment, and heavy-duty handling vehicles.

The upstream of the port bulk cargo handling equipment industry consists of core raw materials. The midstream comprises port machinery and equipment manufacturers. The downstream mainly consists of port operators, terminal companies, mining companies, energy companies, and grain trading companies.

ASEAN, established in 1967, is the most influential regional cooperation organization in Southeast Asia. From its initial political cooperation, ASEAN has evolved into a vital regional economic platform encompassing trade, investment, industry, science and technology, energy, finance, and the digital economy. Currently, ASEAN has 11 member states, a total population exceeding 680 million, and an economic output exceeding US\$ 4.0 trillion, making it a significant emerging economic region globally.

The demand for bulk cargo handling equipment at ASEAN ports is mainly driven by factors such as regional industrialization, growth in energy and resource trade, bulk commodity exports, and infrastructure investment.

The market of port bulk cargo handling equipment in ASEAN is characterized by a supply pattern dominated by international equipment companies, limited local manufacturing capabilities, and a high degree of import dependence.

According to CRI's estimates, the market of port bulk cargo handling equipment will be worth approximately US\$ 900 million in 2026. The compound annual growth rate (CAGR) is projected to be approximately 7.0% from 2026 to 2030, reaching a market size of approximately US\$ 1.18 billion in 2030.

CRI recommends that global port bulk cargo handling equipment manufacturers, major international shipping companies, international port operating groups, and port machinery heavy industry manufacturers, private equity (PE) funds and venture capital (VC) firms conduct timely market research on the ASEAN region to prepare for their strategic entry into this market.
