## Abstracts

Commercial & Industrial Energy Storage System (C&I ESS) refers to an energy storage and management system configured for industrial and commercial users such as industrial parks, manufacturing enterprises, commercial buildings, data centers, logistics parks, and public facilities.

With the global energy transition, the increasing penetration rate of renewable energy and the advancement of electricity price marketization, industrial and commercial energy storage has gradually become an important part of the new energy industry.

The ASEAN market for industrial and commercial energy storage systems is currently in a phase of rapid demand growth. Driven by the energy transition, unstable power supplies, rising electricity prices and the rapid development of distributed new energy sources, the market holds significant growth potential.

According to CRI analysis, some ASEAN countries face problems such as insufficient grid stability, large fluctuations in electricity prices, and a high dependence on diesel power generation.

According to an analysis by CRI, demand for commercial and industrial energy storage within ASEAN is primarily concentrated in Thailand, Malaysia, Singapore, Vietnam and Indonesia.

Over the next 3–5 years, the ASEAN industrial and commercial energy storage market is expected to enter a period of rapid growth.

CRI recommends that global industrial and commercial energy storage equipment

manufacturers, energy storage equipment distributors, international energy storage brand owners and investment institutions conduct timely market research on the ASEAN region to prepare for their strategic entry into the ASEAN energy storage converter market.

CRI's offices in Shanghai, China, and Hanoi, Vietnam, will assist foreign-funded enterprises in entering the ASEAN energy storage converter market.
