Description

Thyroid hormones (TH) have the greatest effect of promoting growth on five-month-old babies or younger ones. Without thyroid hormones mainly promote the growth and development of bones, brain and reproductive organs, even the growth hormone (GH) of pituitary gland can't work. Besides, pituitary gland will produce less GH if there is a lack of thyroid hormones. Therefore, cretinism is caused by congenital TH deficiency. Cretinism patients featuring stagnated bone growth and short stature, have abnormal proportion of upper body to lower body with upper body being longer than ordinary people.

Levothyroxine is used for the treatment of congenital hypothyroidism (cretinism) and the long-term replacement treatment of hypothyroidism caused by various reasons. It can also be used in the suppressive therapy for simple goiter, chronic lymphatic thyroiditis, the suppressive therapy after thyroid cancer and the hyperthyroidism inhibition test.

Levothyroxine has become the best-selling drug after entering various countries. It develops fast after entering China with annual sales value rising from less than CNY 15 million in 2005 to CNY 63.51 million in 2014 and CAGR during this period reaching up to 17.5%. Levothyroxine enjoys a vast demand in China. Merck (Germany), Berlin-Chemie AG (Germany) and China Associated Pharmaceutical all take up certain market share, among which Merck has the largest share of about 95% for sales value in 2014.

The market size of levothyroxine in China is expected to keep growing in the next few years.
