Description

Peripheral neuropathy is a syndrome, which is a single or any combination form of sensory loss, muscle weakness and atrophy, decreased tendon reflex and vasomotion symptoms. The factors which lead to peripheral neuropathy are that the damage of single neural limitation is a common cause of trauma, while multiple single neuropathy occurs secondary to collagen vascular disease; Multiple neuropathy may be caused by toxins, toxic substances, nutrition deficiency, metabolic disease and malignant tumors.

Methylcobalamin, derivative of Vitamin B12, is active Vitamin B12 and the therapeutic drug of peripheral neuropathy. It can promote intraneural nucleic acid, protein and metabolism, facilitate the synthesis of DNA, RNA as well as the synthesis of lecithin lipid, which is the main component of myelin sheath, and accelerate to restore the damaged nerve tissue to improve the transformation of nerve tissue and the disturbance of metabolism. In addition, it also works on restraining unusual exciting conduction of nerve tissue.

Methylcobalamin, whose trade name is mecobalamin, was developed by Eisai Co., Ltd. and put in the market in Japan in the middle of 1980s. In 1996, mecobalamin entered the Chinese market.

Methylcobalamin developed rapidly after entering China. Its annual sales value increased from less than 200 million CNY in 2005 to 441 million CNY in 2014, with CAGR of 12.32%. It had broad market demand in China. Eisai (Suzhou) Pharmaceutical Co., Ltd, Eisai Co., Ltd. (Japan), Jiangsu Sihuan Bioengineering Co., Ltd, Nanjing Hailing Pharmaceutical Co., Ltd. and NCPC occupy large market share, among which

Eisai (Suzhou) Pharmaceutical Co., Ltd occupies most, whose annual market share of sales value was over 40% in 2014.
