### Description

Hemophilia is a hereditary bleeding disorder caused by a lack of clotting factor ? or ?, though not rare, which affects mostly males. Hemophilia A (clotting factor ? deficiency) is the most common form of the disorder. The number of the cases of hemophilia is about over 0.4 million around the world while that in China is about 0.06-0.1 million, among which 80% lack clotting factor ? while over half are in severe conditions.

Injecting clotting factor might be the only effective way to treat hemophilia. Recombinant factor ? (Kogenate Bayer) made by Bayer was approved by FDA and EMEA in 2000 to be used in many countries. In developed countries, the drugs for the prevention and treatment of hemophilia have a huge market. Apart from Bayer Schering, Baxter and Wyeth also make recombinant factor ? too.

After entering China, recombinant factor ? develops fast with annual sales value rising from less than CNY 6 million in 2009 to CNY 93.78 million in 2014 and CAGR reaching up to 76.8% during 2009-2014. Currently, recombinant factor ? in the Chinese market are all imported drugs. They mainly come from the following three companies: Baxter Bioscience Manufacturing (SW), Wyeth Farma S.A. (SP) and Bayer (the US), among which Bayer (the US) has the largest market share of 57.40% by sales value in 2014.

As hemophiliacs' ability to pay for medical treatment keeps increasing due to economic development, the market size of recombinant factor ? in China is expected to keep expanding.
