## Abstracts

Rabeprazole is a kind of proton pump inhibitor (PPI) gastric acid inhibitor. It is used for the treatment of gastroesophageal reflux disease and maintenance treatment after recovery. It is also suitable for the treatment of duodenal ulcers and Zollinger-Ellison syndrome. Rabeprazole's product PARIET, developed by Eisai Pharmaceutical Co., Ltd. of Japan, was approved in China in 2000. As of the end of 2020, there are more than 10 manufacturers in the Chinese Rabeprazole market, of which Jiangsu Aosaikang Pharmaceutical Co., Ltd. accounts for the largest market share.

According to CRI's market research, the sales value of Rabeprazole in the Chinese market increased year by year from 2016 to 2019. Due to the impact of the COVID-19 epidemic on the overall medical diagnosis and treatment services, the sales value decreased to CNY1.334 billion in 2020, with a year-on-year decrease of 11.01%. The CAGR of the sales value of Rabeprazole from 2016 to 2020 is 9.66% in China.

CRI predicts that the sales of Rabeprazole will have a restorative growth from 2021 to 2025 with the effective alleviation of the Covid-19 epidemic. At the same time, only Rabeprazole injections among the six PPI injections listed in China are not listed in the national medical insurance catalog as of the first half of 2021. It may enter medical insurance in the future, prompting sales to continue to increase. In addition, Rabeprazole has no obvious individual differences. Rabeprazole has stabler efficacy and has less interaction with other drugs compared with similar drugs,. Based on these advantages, it is expected that the sales of Rabeprazole in the Chinese market will continue to rise from 2021 to 2025.
