Abstracts

Sevoflurane is an inhalation general anesthetic and also the main inhalation anesthetic at this stage. Inhaled Sevoflurane was originally developed by Abbott and entered the Chinese market in 1996.

In the Chinese market, with the prevalence of chronic diseases, the improvement of the medical system, and the intensification of aging in some regions, the number of operations has increased. Moreover, due to the therapeutic advantages of Sevoflurane, it dominates the anesthesia market. Therefore, CRI predicts that the sales of Sevoflurane will increase in the future.

According to CRI's market research, the sales revenue of Sevoflurane in the Chinese market has increased from 2017 to 2019, and reached CNY729.39 million in 2019. The CAGR for Sevoflurane from 2016 to 2019 is about 2.41%. In 2020, due to the COVID-19 epidemic, the number of surgeries decreased. Thus, the sales of Sevoflurane decreased accordingly. However, CRI analyzes that as the epidemic has improved, the sales of Sevoflurane in the Chinese market will have a recovery growth in 2021-2025.
