Abstracts

Although the largest medical instrument markets are America, Europe and Japan now in the world, China is generally acknowledged the hugest potential market. In the developed countries, the output values between medical instruments and manufacture are 1: 19. It is only 1: 5 in China. There is a huge potential for medical instrument market in China.

The direction of Chinese medical system reform is fundamentally clear. The government will increase the investment in the constructions of public hygiene systems, community systems in urban areas and rural grass-root medical hygiene systems. It can be predicted that Chinese medical instrument market will be in a period of rapid growth in two to three years.

At present, the overall world faces the serious strikes of financial crisis. But investment opportunities still exist under international financial crisis. Because the developed countries are affected by the international financial crisis, they are bound to reduce the public welfare budgets and they have reached the agreements to find excellent quality and reasonable price substitutes, which provides growth opportunities for Chinese medical instruments.

From the part of previous history, medicine industry showed their resistance to reduction in the economic depression period because of its fixed consumers. China was a large production and export country of medium and low quality diagnostic equipments, medical dressing and low and medium valued consumables in the world. Many varieties occupied comparative advantages in the international market. Some products had dominated a certain market share in the international market. It was impossible to replace them with substitutes from other countries in a short time. So far, Chinese

medicine industry is comparatively steady under the influence of international financial crisis, keeping comparatively high profits in medical instrument industry. It is predicted that more attentions from domestic and international investors will be paid to Chinese medical instrument industry.

The author of this report paid attention to the development of Chinese Medical Instrument Industry for a long time and investigated into Chinese Medical Instrument Industry to write this report citing abundant valuable second –hand information.
