Abstracts

PVC gloves are gloves made from polyvinyl chloride as the main raw material and are the main type of protective gloves with characteristics such as resistance to weak acids and alkalis, low ionic content, and flexibility in use. PVC gloves are widely used in health inspection, food industry, chemical industry, electronics industry, biopharmaceutical industry, etc. With the global economic development, the expansion of medical and health, food and electronics industries has promoted the PVC gloves market growth.

China is a major global producer and exporter of PVC gloves, exporting large quantities of PVC gloves every year. According to CRI's analysis, in 2021, China exported 54.587 billion pairs of PVC gloves, down 15.82% year-on-year, with an export value of US\$3.637 billion, down 6.92% year-on-year. From January to October 2022, China exported 34.894 billion pairs of PVC gloves, down 25.71% year-on-year, with an export value of US\$1.055 billion, down 68.69% year-on-year. The main reason for the decline in China's PVC glove exports from 2021-2022 is the impact of the COVID-19 epidemic.

In 2021, China exported PVC gloves to more than one hundred and seventy countries and regions worldwide. CRI analysis shows that by export volume, the United States, Japan, Saudi Arabia, the Russian Federation, Canada, France, Germany, Australia, Brazil and Italy are the main export destinations for China's PVC gloves. Among them, the U.S. is the largest destination for China's PVC glove exports. 26.392 billion pairs of PVC gloves were exported from China to Indonesia in 2021, accounting for 48.35% of the total PVC glove exports that year with an export value of US\$1.874 billion, or 51.53% of the total export value.

China is a major global producer and exporter of PVC gloves. CRI expects China's PVC glove exports to grow in size from 2023-2032 as the global PVC glove market grows.
