Abstracts

A range hood is an appliance that purifies the kitchen environment, collecting grease and smoke and thus reducing pollution. As the global economy grows, consumers are placing more and more emphasis on high-quality kitchens, and as a result, sales of range hoods are on the rise worldwide.

China is one of the major producers and exporters of range hoods worldwide. According to CRI analysis, in 2021, China exported 14,346,700 range hoods, up 26.39% year-on-year, and the export value was US\$795 million, up 32.75% year-on-year. In 2022, China's range hood exports declined because of COVID-19. From January to October 2022, China exported 9,056,300 range hoods, down 23.61%, and the export value was US\$ 581 million, down 10.20% year-on-year.

In 2021, China exported range hoods to more than 170 countries and regions around the world. CRI analysis shows that by export volume, the United States, India, the United Kingdom, the Russian Federation, France, Germany, Malaysia, Australia, Spain and South Korea are the main export destinations for range hoods from China. Among them, the U.S. is the largest destination for China's range hood exports. In 2021, China exported 1.5056 million units of range hoods to the U.S., accounting for 10.49% of total range hood exports that year with an export value of US\$118 million, accounting for 14.91% of the total export value.

China is one of the world's leading producers and exporters of kitchen appliances, and CRI expects China's range hood exports to continue to grow from 2023-2032 as global range hood sales rise.
