Abstracts

A wind turbine is a system that converts the kinetic energy of the wind into electrical energy and is the core component of a wind farm. Wind energy has now become one of the most important sources of global electricity supply.

With the global vigorous development of renewable energy, the installed capacity of wind power generation is rising, which has boosted China's wind turbine exports. According to CRI's analysis, in 2021, China exported 44,000 wind turbines, up 6.99% year-on-year, with an export value of US\$1.437 billion, up 29.56% year-on-year. From January to October 2022, China exported 66,400 wind turbines, up 89.06% year-on-year, with an export value of US\$894 million, down 30.91% year-on-year.

In 2018-2022, the average price of China's wind turbine exports showed an overall fluctuating trend of change. According to CRI analysis, in 2021, the average price of China's wind turbine exports was US\$32,600 per unit, up 21.10% y-o-y. From January to October 2022, the average price of China's wind turbine exports fell sharply to US\$13,500 per unit, down 63.46% y-o-y.

In 2021, China exported wind turbines to more than one hundred countries and regions. CRI analysis shows that by export volume, the United States, Belgium, Poland, the Netherlands, the United Kingdom, Australia, Germany, Canada, Hungary and Vietnam are China's major wind turbine export destinations. Among them, the United States is the largest exporter of wind turbines from China.

In 2021, China exported 11,200 wind turbines to the U.S., accounting for 25.50% of the total wind turbine exports in that year, and the export value was only US\$1,899,500, accounting for 0.13% of the total export value. In 2021, China's wind turbine exports to

Vietnam amounted to US\$711 million, accounting for 49.46% of the total exports.

China is an important global producer and exporter of wind turbines, and the Chinese wind power industry covers technology development, equipment supply, wind farm construction, etc. CRI expects that China's wind turbine exports are expected to continue to rise from 2023-2032 as the global wind power industry develops.
