Abstracts

Southeast Asia is rich in natural gas resources, mainly located in Indonesia, Malaysia, Vietnam, Myanmar, Brunei and Thailand. Brunei, Indonesia and Malaysia are the world's leading producers and exporters of natural gas, and the gas industry has become one of the major growth areas of their economies.

Southeast Asia is also currently one of the most economically active regions in the world, with rapidly developing economies and huge scope for growth in natural gas demand. In Vietnam, for example, the current annual demand for LNG is about 2-2.2 million tons, and with domestic gas exploration and development efforts hampered, Vietnam needs to rely heavily on gas imports to meet its demand for natural gas products.

Southeast Asia in this report includes 10 countries: Singapore, Thailand, Philippines, Malaysia, Indonesia, Vietnam, Myanmar, Brunei, Laos and Cambodia. With a total population of over 600 million by the end of 2021, Southeast Asia has an overall economic growth rate higher than the global average and is one of the key drivers of future global economic growth.

According to CRI's analysis, the economic levels of the 10 Southeast Asian countries vary greatly, with Singapore being the only developed country with a per capita GDP of about US\$73,000 in 2021. While Myanmar and Cambodia will have a GDP per capita of less than US\$2,000 in 2021. The population and minimum wage levels of each country also vary greatly. Brunei, which has the smallest population, will have a total population of less than 500,000 people in 2021, while Indonesia, which has the largest population, will have a population of about 275 million people in 2021.

CRI expects the gas industry in Southeast Asia to maintain growth from 2023-2032. On one hand, the abundant natural gas resources and cheap labor costs in Southeast Asia attract international gas companies to invest in Southeast Asia and drive its gas industry. On the other hand, strong energy demand will boost Southeast Asia's gas industry as the countries' economies grow and demand for energy such as natural gas grows.
