Abstracts

Hyperloop transportation system is the modern version of very high speed rail transportation. Hyperloop transportation is a manner of transportation of passengers and freights or cargo. The hyperloop transportation system comprises of a sealed tube through which a pod or may be said an elongated vehicle may travel free of air friction or air resistance to transfer people or cargos at a high speed. The hyperloop transportation system serves the purpose of transportation of passengers as well as

Cargo or freights. Among the overall hyperloop transportation system market the passenger transportation holds the largest share. The hyperloop technology is expected to be the world's fastest method of public transportation. The recent innovation in rail transportation system is an example of hyperloop transportation system. The hyperloop technology is the cheapest and fastest mode of transport in the years to come. Thus, hyperloop transportation being the future of transportation it is expected to enhance the market growth during the forecast period of 2022-2030.

Hyperloop transportation system offers wide range of benefits in the public transport sector. These benefits may include smooth and faster way of travelling without wastage

of time. The hyperloop train travels in a vacuum tube which states that there is almost no air and therefore the chances of air resistance are much less. Market of 'Hyperloop Transportation System' is still at a very nascent stage in some regions and with a billion dollar investments in research and development sector, market growth is expected to have a very high potential.

The hyperloop transportation system market in report is segmented by component type which is further categorized into different parts such as steel, aluminium, solar array, rotor, stator, compressor, batteries and others. The report has been further segmented by vehicle capsule which includes capsule doors, interior and seats, propulsion systems, suspension and air bearings, braking system, and others. The global hyperloop transportation system market has been moreover segmented geographically into North America, Europe, Asia-Pacific, Middle East and Africa and Latin America.

Hyperloop transportation system is one of a new kind of technology and is expected to grow at a high rate with the increase in transportation network across the globe. Hyperloop technology will be one of the major trends to gain traction in this market in the upcoming years. Also the cost of travel for hyperloop technology is assumed to be low as compared to trains and airplanes which in turn will certainly augment the the growth of hyperloop transportation system market. The rise in demand in the transportation network, hyperloop technology can increase the demand for hyperloop transportation system.

Some of the major players in the advanced telematics technology market are Hyperloop One, TransPod Inc., Hyperloop Transportation Technologies and SpaceX among others
