

Next-Generation Flexible Thin-film Solar Cell Technology and Market Forecast (2009~2020)

<https://marketpublishers.com/r/N5BF353955BEN.html>

Date: February 2013

Pages: 415

Price: US\$ 3,950.00 (Single User License)

ID: N5BF353955BEN

Abstracts

As cost reduction and product diversification are becoming important issues in the PV industry, flexible solar cells are drawing a lot of attention. Since most of conventional solar cells are formed on hard substrates such as wafers or glass, they are deformed or broken when forces are applied. However, flexible solar cells, drawing attention as one of next-generation solar cells, are bendable or twistable. Thus, thin-film solar cells are mainly used for flexibility. They are transformable according to circumstances, light-weight, and highly portable.

Because of these advantages, flexible solar cells are expected to be applied for various purposes, since they are enough to compete with other commercially available solar cells, provided that flexible substrates are developed first, and optimized technologies for the substrates are developed. Current thin-film solar cells using flexible substrates (metal foil, and plastic) are under disadvantages in terms of cost reduction due to the complex manufacturing process and inefficient aspects of the mass-production process. Thus, intensive research and investment are required to reduce the manufacturing costs.

Although United Solar Ovonic (USA) had took the lead with a-Si solar cells until 2009 in the flexible solar cell market, as new CIGS and other flexible solar cell manufacturers began to the market, the market began to grow in earnest from 2010. Although there has been a sharp decrease in production due to the global economic depression and oversupply of solar cells from 2011, it is expected that the market will begin grow from 2013 and be reinstated to the former level in 2014. After that, the market is expected to grow with a very high growth rate, reaching 1.6GW in production in 2020.

(Source: SNE Research, 2013, ' Next-Generation Flexible Thin-film Solar Cell

Technology and Market Forecast(2009~2020))
SNE Research has reported a new report titled ??Next-Generation Flexible Thin-film
Solar Cell Technology and Market Forecast (2009~2020)??

This report is dedicated to examining flexible thin-film solar cell technologies and market
trends, embracing

Overview of flexible thin-film solar cells

Research trend of flexible thin-film solar cell research institutes and companies

Flexible thin-film solar cell technology issues and new technology trends

Flexible thin-film solar cell market forecast

Flexible thin-film solar cell substrate and device technologies

I would like to order

Product name: Next-Generation Flexible Thin-film Solar Cell Technology and Market Forecast
(2009~2020)

Product link: <https://marketpublishers.com/r/N5BF353955BEN.html>

Price: US\$ 3,950.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer
Service:

info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click
button on product page <https://marketpublishers.com/r/N5BF353955BEN.html>

To pay by Wire Transfer, please, fill in your contact details in the form
below:
