Abstracts

Mobile networks around the globe generate more than 50 Exabytes of traffic annually. The immense volume of traffic together with the growing adoption of open source Operating System (OS) platforms such as Android has opened up new security threats. Mobile malware, SMS spam, cyber attacks and unlawful eavesdropping are an ever-increasing problem for enterprises, consumers and mobile network operators around the globe.

This has in turn led to significant investments in integrated security appliances and content security gateways by both enterprises and mobile network operators, besides opening doors for emerging submarkets such as mobile Security as a Service (SEaaS).

On the devices front, installation of Anti-Malware/Anti-Virus client software is fast becoming a de-facto requirement for most smartphones and tablets. Furthermore, mobile device OEMs are also integrating advanced biometrics such as fingerprint sensing into their smartphones and tablets, amid growing popularity of security sensitive opportunities such as mobile payments.

Driven by the thriving ecosystem, SNS Research estimates that mobile device and network security investments will account for nearly \$9 Billion in 2013 alone. The market is further expected to grow at a CAGR of nearly 21% over the next 7 years.

This report presents in-depth assessment of the global mobile device and network security market, and covers four individual submarkets. In addition to covering key market drivers, challenges, future roadmap, value chain analysis, deployment case studies and vendor service/product strategies for each submarket, the report also presents comprehensive forecasts for the mobile device and network security market

from 2013 till 2020. Historical revenue figures for 2010 – 2012 are also presented. The forecasts and historical revenue figures are individually segmented for four submarkets, 17 product/service categories, six geographical regions and 34 countries.

The report comes with an associated Excel datasheet covering quantitative data from all figures presented within the report.

Topics Covered:

The report covers the following topics:

An in-depth analysis for four individual submarkets and their associated product/service categories: Mobile Network Infrastructure Security Software & Appliances, Mobile Device Client Security Software, Mobile Device Security Hardware and Mobile Security & MDM Services

Value chain analysis for each submarket

Key market drivers and challenges for each submarket

Key trends for each submarket

Case studies on product/service deployment for each submarket

Profiles and strategies of key players in the market

Historical revenue figures and forecasts till 2020

Historical Revenue & Forecast Segmentation:

Market forecasts and historical revenue figures are provided for each of the following submarkets and their 17 product/service categories:

Mobile Network Infrastructure Security Software & Appliances

Integrated Security Appliances (Hardware & Software)

Content Security Gateways

SMS/MMS Content Security Gateways

Mobile Device Client Security Software

Anti-Malware/Anti-Virus Client Software

Back Up & Restore Software

Privacy Protection Software

Mobile VPN Client Software

Remote Locking Software

Remote Tracking Software

Encrypted Communications (Voice/Data) Software

Encrypted Storage Software

Mobile Device Security Hardware

Semiconductors/Embedded Chip Security

NFC

Biometrics

Mobile Security & MDM (Mobile Device Management) Services

On-premises Mobile Security MDM Services

Cloud Based Mobile SEaaS (Security as a Service)

Mobile Identity Management Services

The following regional and country markets are also covered:

Regional Markets

Asia Pacific

Eastern Europe

Latin & Central America

Middle East & Africa

North America

Western Europe

Country Markets

Argentina, Australia, Brazil, Canada, China, Czech Republic, Denmark, Finland, France, Germany, India, Indonesia, Israel, Italy, Japan, Malaysia, Mexico, Norway, Pakistan, Philippines, Poland, Qatar, Russia, Saudi Arabia, Singapore, South Africa, South Korea, Spain, Sweden, Taiwan, Thailand, UAE, UK, USA

Key Findings:**The report has the following key findings:**

Driven by the thriving ecosystem, SNS Research estimates that mobile device and network security investments will account for nearly \$9 Billion in 2013 alone. The market is further expected to grow at a CAGR of nearly 21% over the next 7 years

Enterprises and mobile network operators have made significant investments in integrated security appliances and content security gateways (including those specific to SMS/MMS security)

The installation of Anti-Malware/Anti-Virus client software is fast becoming a de-facto requirement for most smartphones and tablets

More than half of all enterprises allow the use of employed owned mobile

devices on their networks. Enterprises thus continue to aggressively adopt SSL VPNs in their mobile security strategies to ensure connection security in addition to activity monitoring and control

Mobile Device Management (MDM) services providers are eyeing on opportunities for cloud based mobile security services that extend existing security policies to enterprise mobile devices to help secure data, reduce risk and protect the enterprise, which has created a new submarket for mobile Security as a Service (SEaaS)

Key Questions Answered:

The report provides answers to the following key questions:

How big is the mobile device and network security market, and what particular submarkets does it constitute?

Who are the key players in each submarket?

How is the value chain structured for each submarket and how will it evolve overtime?

Which regions and countries will witness the highest percentage of growth in mobile security spending?

Will recent privacy scandals have a negative impact on mobile security spending in the coming years?

What known malware families are most dangerous for modern smartphones?

Contents

1 CHAPTER 1: INTRODUCTION

- 1.1 Executive Summary
- 1.2 Topics Covered
- 1.3 Historical Revenue & Forecast Segmentation
- 1.4 Key Questions Answered
- 1.5 Key Findings
- 1.6 Methodology
- 1.7 Target Audience
- 1.8 Companies & Organizations Mentioned

2 CHAPTER 2: AN OVERVIEW OF THE MOBILE DEVICE & NETWORK SECURITY MARKET

- 2.1 The Importance of Mobile Devices & Networks
 - 2.1.1 Mobile Devices Outnumber PCs & Notebooks
 - 2.1.2 Supporting a Plethora of Applications & Hardware Peripherals
 - 2.1.3 Vulnerability to Attacks: Opening the Market for Mobile Security
- 2.2 What Constitutes the Mobile Device & Network Security Market?
- 2.3 Mobile Network Infrastructure Security Software & Appliances
 - 2.3.1 Overview
 - 2.3.2 What Constitutes this Submarket?
 - 2.3.3 Value Chain
 - 2.3.4 Vendor Landscape: Key Characteristics
- 2.4 Mobile Device Client Security Software
 - 2.4.1 Overview
 - 2.4.2 What Constitutes this Submarket?
 - 2.4.3 Value Chain
 - 2.4.4 Vendor Landscape: Key Characteristics
- 2.5 Mobile Device Security Hardware
 - 2.5.1 Overview
 - 2.5.2 What Constitutes this Submarket?
 - 2.5.3 Value Chain
 - 2.5.4 Vendor Landscape: Key Characteristics
- 2.6 Mobile Security & MDM Services
 - 2.6.1 Overview
 - 2.6.2 What Constitutes this Submarket?

2.6.3 Value Chain

2.6.4 Vendor Landscape: Key Characteristics

3 CHAPTER 3: MOBILE NETWORK INFRASTRUCTURE SECURITY SOFTWARE & APPLIANCES

3.1 Integrated Security Appliances

3.1.1 Introduction

3.1.2 How Integrated Security Appliance Help in Securing Mobile Networks?

3.1.3 Integrated Security Appliance Use Cases

3.1.3.1 Firewall

3.1.3.2 Intrusion Prevention System (IPS)

3.1.3.3 Email Protection System

3.1.3.4 Identity Protection System

3.1.3.5 Content Filtering

3.1.3.6 Anti-Virus and Anti-Spyware Protection

3.1.3.7 Anti-Spam Filtering

3.1.3.8 Virtual Private Networks (VPN)

3.1.4 Key Market Drivers

3.1.4.1 Mobility

3.1.4.2 Small Businesses

3.1.4.3 Ubiquity

3.1.4.4 Compliance

3.1.4.5 Processing Power

3.1.5 Key Market Challenges

3.1.5.1 Design Trade-offs

3.1.5.2 Single Point of Failure

3.1.6 Key Players in the Market

3.1.7 Recent Innovations and Developments

3.1.7.1 Case Study: Sophos

3.1.7.2 Case Study: Fortinet

3.2 Content Security Gateways

3.2.1 Introduction

3.2.2 How Content Security Gateways Protect Mobile Networks?

3.2.3 Delivery Modes

3.2.4 Features

3.2.5 Key Market Drivers

3.2.5.1 Internet Growth

3.2.5.2 Granularity of Features

- 3.2.6 Key Market Challenges
 - 3.2.6.1 Risk-reward Ratio
- 3.2.7 Key Players in the Market
- 3.2.8 Recent Innovations and Developments
 - 3.2.8.1 Case Study: SaaS based Vendors

4 CHAPTER 4: MOBILE DEVICE CLIENT SECURITY SOFTWARE

- 4.1 Anti-Malware/Anti-Virus Client Software
 - 4.1.1 Introduction
 - 4.1.2 Detection Mechanism: How it Works?
 - 4.1.3 Delivery Mode
 - 4.1.4 Performance Barometers
 - 4.1.5 Key Market Drivers
 - 4.1.5.1 Mobile Device Shipment Volumes
 - 4.1.5.2 Device Metamorphosis
 - 4.1.5.3 Application Marketplaces
 - 4.1.6 Key Market Challenges
 - 4.1.6.1 Limited Resource Availability
 - 4.1.6.2 Scepticism
 - 4.1.7 Key Players in the Market
 - 4.1.8 Recent Innovations and Developments
 - 4.1.8.1 Case Study: Antivirus Test Results
 - 4.1.8.2 Vulnerability Against Malware
- 4.2 Back Up & Restore Software
 - 4.2.1 Introduction
 - 4.2.2 Trend Micro Case Study: How Mobile Back Up & Restore Software Works?
 - 4.2.3 Delivery Mode
 - 4.2.4 Key Market Drivers
 - 4.2.4.1 Short Replacement Cycles
 - 4.2.4.2 Maturity of Third Party Hosting Services
 - 4.2.5 Key Market Challenges
 - 4.2.5.1 Software Usability Issues
 - 4.2.5.2 Data Security & Confidentiality in the Cloud
 - 4.2.6 Key Players in the Market
 - 4.2.7 Recent Innovations and Developments
 - 4.2.7.1 Case Study: Axiom and NQ Mobile
 - 4.2.7.2 Case Study: Cellebrite
- 4.3 Privacy Protection Software

- 4.3.1 Introduction
- 4.3.2 How Does Mobile Privacy Protection Software Work?
- 4.3.3 Key Market Drivers
 - 4.3.3.1 Proliferation of Mobile User Information
 - 4.3.3.2 Monitoring & Regulating Access to Personal Data
- 4.3.4 Key Market Challenges
 - 4.3.4.1 Ambiguity of Functionality & Software Bundling
 - 4.3.4.2 Lack of Commercial Instigation
- 4.3.5 Recent Innovations and Developments
 - 4.3.5.1 CalOPPA
- 4.4 Mobile VPN Client Software
 - 4.4.1 Introduction
 - 4.4.2 How Mobile VPN Works?
 - 4.4.3 Key Market Drivers
 - 4.4.3.1 Privacy over Public Mobile Networks
 - 4.4.3.2 Bypassing Restrictions
 - 4.4.4 Key Market Challenges
 - 4.4.4.1 Duality of Android
 - 4.4.4.2 Interoperability
 - 4.4.5 Key Players in the Market
 - 4.4.6 Recent Innovations and Developments
 - 4.4.6.1 Case Study: Inside Secure
- 4.5 Remote Locking Software
 - 4.5.1 Introduction
 - 4.5.2 How Remote Locking Software Works?
 - 4.5.3 Key Market Drivers
 - 4.5.4 Key Market Challenges
 - 4.5.5 Key Players in the Market
 - 4.5.6 Recent Innovations and Developments
- 4.6 Remote Tracking Software
 - 4.6.1 Introduction
 - 4.6.2 How Remote Tracking Software Works?
 - 4.6.3 Key Market Drivers
 - 4.6.3.1 Device Recovery
 - 4.6.3.2 Proactive Location Based Warning
 - 4.6.4 Key Market Challenges
 - 4.6.4.1 Privacy Concerns
 - 4.6.4.2 Location Technology Challenges
 - 4.6.5 Key Players in the Market

- 4.6.6 Recent Innovations and Developments
 - 4.6.6.1 Case Study: SK Telecom
- 4.7 Encrypted Communications (Voice/Data) Software
 - 4.7.1 Introduction
 - 4.7.2 How Encrypted Communications Software Works?
 - 4.7.2.1 AT&T's Approach
 - 4.7.2.2 Cellcrypt's Approach
 - 4.7.2.3 RIM's Approach
 - 4.7.3 Key Market Drivers
 - 4.7.3.1 Confidentiality
 - 4.7.3.2 Wider Stakeholder Participation
 - 4.7.4 Key Market Challenges
 - 4.7.4.1 Overheads
 - 4.7.4.2 Managing the Balance
 - 4.7.5 Key Players in the Market
 - 4.7.6 Recent Innovations and Developments
 - 4.7.6.1 Case Study: Silent Circle
- 4.8 Encrypted Storage Software
 - 4.8.1 Introduction
 - 4.8.2 How Encrypted Storage Software Works?
 - 4.8.3 Key Market Drivers
 - 4.8.3.1 Preserving Integrity of Personal Data
 - 4.8.3.2 Remote Functionality
 - 4.8.4 Key Market Challenges
 - 4.8.4.1 Performance Issues
 - 4.8.5 Key Players in the Market
 - 4.8.6 Recent Innovations and Developments

5 CHAPTER 5: MOBILE DEVICE SECURITY HARDWARE

- 5.1 Semiconductors/Embedded Chip Security
 - 5.1.1 Introduction
 - 5.1.2 How Embedded Chip Security Works?
 - 5.1.3 Scenarios to be Catered For
 - 5.1.3.1 Secure Paths Within the Device
 - 5.1.3.2 Enforcing DRM Rules
 - 5.1.3.3 Enforcing Software and Hardware Integrity
 - 5.1.3.4 Management of Meta-data
 - 5.1.3.5 Management of Updates

- 5.1.3.6 Management of Mobile Payments
- 5.1.3.7 Preventing Unauthorized Access to the Device
- 5.1.4 Role Played by TCG
 - 5.1.4.1 TPM Mobile
- 5.1.5 Key Market Drivers
 - 5.1.5.1 Best Fitment
 - 5.1.5.2 Advances in Cryptography
- 5.1.6 Key Market Challenges
 - 5.1.6.1 Stakeholder Ennui
- 5.1.7 Key Players in the Market
- 5.1.8 Recent Innovations and Developments
 - 5.1.8.1 Barriers to TPM Mobile
 - 5.1.8.2 Can Embedded Chip Security Deter the Growth of Security Software Applications?
- 5.2 NFC
 - 5.2.1 Introduction
 - 5.2.2 How NFC Works?
 - 5.2.2.1 Features and Use Cases
 - 5.2.2.2 Is NFC Immune to Eavesdropping?
 - 5.2.2.3 Security Measures
 - 5.2.3 Key Market Drivers
 - 5.2.3.1 Universality & Versatility
 - 5.2.3.2 Support from Mobile Network Operators
 - 5.2.4 Key Market Challenges
 - 5.2.4.1 Stakeholder Reluctance to Hardware Modification
 - 5.2.4.2 Lack of Focus on Robust Encryption Techniques
 - 5.2.5 Key Players in the Market
 - 5.2.5.1 Early Developers
 - 5.2.5.2 Mobile Network Operators
 - 5.2.5.3 Semiconductor Chipset Makers
 - 5.2.5.4 Mobile OEMs
 - 5.2.6 Recent Innovations and Developments
 - 5.2.6.1 Google Wallet: Transforming Mobile Devices Into Virtual Wallets
 - 5.2.6.2 ISIS
- 5.3 Biometrics
 - 5.3.1 Introduction
 - 5.3.1.1 Representing Identity Data
 - 5.3.1.2 Fingerprint Capture
 - 5.3.1.3 Facial Feature Recognition

- 5.3.1.4 Usage of Voice Recognition
- 5.3.2 How Biometrics Work?
 - 5.3.2.1 Enrollment
 - 5.3.2.2 Sample Extraction
 - 5.3.2.3 Biometric Validation
- 5.3.3 Key Market Drivers
 - 5.3.3.1 Mobility & Emerging Applications of Biometrics
 - 5.3.3.2 Mobile Network Operator Interest
- 5.3.4 Key Market Challenges
 - 5.3.4.1 Hardware Value Addition
 - 5.3.4.2 Stakeholder Scepticism
- 5.3.5 Key Players in the Market
- 5.3.6 Recent Innovations and Developments
 - 5.3.6.1 Voice Recognition Software: Lessons for Mobile Biometrics
 - 5.3.6.2 EyeVerify: Identifying Live Eye Vein Patterns

6 CHAPTER 6: MOBILE SECURITY AND MDM SERVICES

- 6.1 On-Premises Mobile Security MDM Services
 - 6.1.1 Introduction
 - 6.1.2 How MDM Services Work?
 - 6.1.3 Essential Attributes of MDM Services
 - 6.1.3.1 Accessibility
 - 6.1.3.2 Should Not be Perceived as an Overhead
 - 6.1.3.3 Granularity
 - 6.1.3.4 Ease of Maintenance and Management
 - 6.1.4 Key Market Drivers
 - 6.1.4.1 Dissolution of Distinction between Personal and Official Devices
 - 6.1.4.2 The Growing Penetration of the iPhone and Android Devices
 - 6.1.4.3 BYOD
 - 6.1.4.4 Need for Policy Framework
 - 6.1.5 Key Market Challenges
 - 6.1.5.1 Administration Overhead
 - 6.1.5.2 Distinguishing between Personal and Corporate Usage
 - 6.1.6 Key Players in the Market
 - 6.1.7 Recent Innovations and Developments
- 6.2 Cloud Based Mobile SECaaS MDM Services
 - 6.2.1 Introduction
 - 6.2.2 How Cloud Based Mobile SaaS MDM Services Work?

6.2.3 Desirable Attributes

6.2.3.1 Integration with Directory Services

6.2.3.2 Email Access Control

6.2.3.3 Network Up-time and Availability

6.2.3.4 Operational and Security Practices

6.2.3.5 Measures to Reduce Manual Intervention

6.2.4 Key Market Drivers

6.2.4.1 Freedom from Upfront Investment

6.2.4.2 Tackling Obsolescence

6.2.4.3 Operational Synergy

6.2.5 Key Market Challenges

6.2.5.1 Implications of Hosting

6.2.6 Key Players in the Market

6.2.7 Case Study of Integrated MDM: AirWatch

6.2.7.1 OS Support

6.2.7.2 MDM Features

6.2.7.3 Hosting Models

6.2.7.4 Licensing Mechanism

6.3 Mobile Identity Management Services

6.3.1 Introduction

6.3.2 History

6.3.3 Modus operandii, innovations and key players explained through diverse approaches

6.3.3.1 Active Directory from Microsoft

6.3.3.2 SSO from Oracle

6.3.3.3 Establishing the SIM Card as an Authentication Device

6.3.3.4 Adding Mobility to Digital Ids: Valimo/Gemalto Case Study

6.3.4 Key Market Drivers

6.3.4.1 Mobility for Business Users

6.3.4.2 Ease of Use

6.3.4.3 Financial Inclusion

6.3.4.4 Incentive for Mobile Network Operators

6.3.5 Key Market Challenges

6.3.5.1 Device Vulnerability

7 CHAPTER 7: KEY COMPANY PROFILES

7.1 3M Cogent

7.2 Actiance

7.3 Adtran
7.4 AirWatch
7.5 Amtel
7.6 AT&T
7.7 AVG
7.8 Barracuda
7.9 BullGuard
7.1 Cellabrite
7.11 Cisco Systems
7.12 Dell
7.13 Ericsson
7.14 ESET
7.15 F-Secure
7.16 IBM
7.17 Inside Secure
7.18 Kaspersky Lab
7.19 KoolSpan
7.2 LookOut
7.21 McAfee
7.22 Microsoft
7.23 MobileIron
7.24 Mocana
7.25 Motorola Solutions
7.26 Netmotion
7.27 Nokia
7.28 NQ Mobile
7.29 NXP
7.3 Oracle
7.31 Panda Security
7.32 RIM
7.33 Sophos
7.34 Soti
7.35 SRA International
7.36 Symantec
7.37 Trend Micro
7.38 Untangle
7.39 Webroot
7.4 ZyXEL
7.41 Others

8 CHAPTER 8: MARKET ANALYSIS & FORECASTS

8.1 Global Outlook of the Mobile Device & Network Security Market

8.2 Submarket Segmentation

8.3 Mobile Network Infrastructure Security Software & Appliances Submarket

8.3.1 Integrated Security Appliances for Mobile Networks

8.3.2 Content Security Gateways for Mobile Networks

8.3.3 SMS/MMS Security Gateways for Mobile Networks

8.4 Mobile Device Client Security Software Submarket

8.4.1 Anti-Malware/Anti-Virus Client Software

8.4.2 Back Up & Restore Software

8.4.3 Privacy Protection Software

8.4.4 Mobile VPN Client Software

8.4.5 Remote Locking

8.4.6 Remote Tracking Software

8.4.7 Encrypted Communication (Voice/Data) Software

8.4.8 Encrypted Storage Software

8.4.9 Enterprise vs. Consumer Segmentation

8.5 Mobile Device Security Hardware Submarket

8.5.1 Semiconductors/Embedded Chip Security

8.5.2 NFC

8.5.3 Biometrics

8.6 Mobile Security & MDM Services

8.6.1 On-premises Mobile Security MDM Services

8.6.2 Cloud Based Mobile SECaaS Services

8.6.3 Mobile Identity Management Services

8.7 Regional Outlook

8.8 Asia Pacific

8.8.1 Submarket Segmentation

8.8.2 Mobile Network Infrastructure Security Software & Appliances

8.8.3 Mobile Device Client Security Software

8.8.4 Mobile Device Security Hardware

8.8.5 Mobile Security & MDM Services

8.8.6 Country Level Segmentation

8.8.7 Australia

8.8.8 China

8.8.9 India

8.8.10 Japan

- 8.8.11 South Korea
- 8.8.12 Pakistan
- 8.8.13 Thailand
- 8.8.14 Indonesia
- 8.8.15 Malaysia
- 8.8.16 Taiwan
- 8.8.17 Philippines
- 8.8.18 Rest of Asia Pacific
- 8.9 Eastern Europe
 - 8.9.1 Submarket Segmentation
 - 8.9.2 Mobile Network Infrastructure Security Software & Appliances
 - 8.9.3 Mobile Device Client Security Software
 - 8.9.4 Mobile Device Security Hardware
 - 8.9.5 Mobile Security & MDM Services
 - 8.9.6 Country Level Segmentation
 - 8.9.7 Czech Republic
 - 8.9.8 Poland
 - 8.9.9 Russia
 - 8.9.10 Rest of Eastern Europe
- 8.1 Latin & Central America
 - 8.10.1 Submarket Segmentation
 - 8.10.2 Mobile Network Infrastructure Security Software & Appliances
 - 8.10.3 Mobile Device Client Security Software
 - 8.10.4 Mobile Device Security Hardware
 - 8.10.5 Mobile Security & MDM Services
 - 8.10.6 Country Level Segmentation
 - 8.10.7 Argentina
 - 8.10.8 Brazil
 - 8.10.9 Mexico
 - 8.10.10 Rest of Latin & Central America
- 8.11 Middle East & Africa
 - 8.11.1 Submarket Segmentation
 - 8.11.2 Mobile Network Infrastructure Security Software & Appliances
 - 8.11.3 Mobile Device Client Security Software
 - 8.11.4 Mobile Device Security Hardware
 - 8.11.5 Mobile Security & MDM Services
 - 8.11.6 Country Level Segmentation
 - 8.11.7 South Africa
 - 8.11.8 UAE

- 8.11.9 Qatar
- 8.11.10 Saudi Arabia
- 8.11.11 Israel
- 8.11.12 Rest of the Middle East & Africa
- 8.12 North America
 - 8.12.1 Submarket Segmentation
 - 8.12.2 Mobile Network Infrastructure Security Software & Appliances
 - 8.12.3 Mobile Device Client Security Software
 - 8.12.4 Mobile Device Security Hardware
 - 8.12.5 Mobile Security & MDM Services
 - 8.12.6 Country Level Segmentation
 - 8.12.7 USA
 - 8.12.8 Canada
- 8.13 Western Europe
 - 8.13.1 Submarket Segmentation
 - 8.13.2 Mobile Network Infrastructure Security Software & Appliances
 - 8.13.3 Mobile Device Client Security Software
 - 8.13.4 Mobile Device Security Hardware
 - 8.13.5 Mobile Security & MDM Services
 - 8.13.6 Country Level Segmentation
 - 8.13.7 Denmark
 - 8.13.8 Finland
 - 8.13.9 France
 - 8.13.10 Germany
 - 8.13.11 Italy
 - 8.13.12 Spain
 - 8.13.13 Sweden
 - 8.13.14 Norway
 - 8.13.15 UK
 - 8.13.16 Rest of Western Europe

About

SNS Research estimates that by the end of 2013, annual shipments of connected mobile devices will outnumber PC and notebook shipments by almost 1.6 Billion units.

The quantum jumps in connection speeds offered by mobile network operators have expanded the scope of content that can be rendered and exchanged using mobile devices, considerably. In 2013 alone, SNS Research estimates that mobile devices will generate nearly 58 Exabyte's of network traffic.

Anti-Malware/Anti-Virus Client Software

Mobile anti-virus works pretty much like its PC counterpart. Antivirus protects devices against viruses and other malicious programs such as Trojans, rootkits, worms, spyware and others.

Detection Mechanism: How it Works?

Anti-virus technology, at its heart, is a detection tool. Anti-viruses look for signatures of known viruses, predominantly in code that can be executed. Their work does not stop with that, as they have to detect unknown threats as well. These are instances of malicious code that have not been identified. Here, they employ heuristic techniques, which combine anomaly detection with specific instances of behavior of known viruses to checkmate impending threats. Present day anti-viruses do not limit themselves to scanning resources only on being prompted; they form a veritable protective shield which keeps an eye on critical system resources to detect the presence of malicious code. The shield helps in achieving real time protection for the device.

Delivery Mode

Mobile anti-viruses can be downloaded directly on mobile devices through the vendor's website or the application market place run by the mobile OS developer. In earlier years, the preferred mode of mobile antivirus installation was to transfer it to the device from a PC.

MHz band. This is an unlicensed band reserved for industrial, scientific and medical (ISM) applications. Maximum data rate supported by NFC are 424 kbps. Clearly, NFC is a low data rate standard. Its operating range distance is capped typically at 10 cm.

While a majority of the NFC use-cases are in the form of readertag communication; peer-to-peer communication is also possible, provided both the devices are powered. NFC is supposed to be in active mode if the tags have access to power independently. In such cases, the tag and the reader can generate their own magnetic fields. When independent power to the tag is absent, NFC is said to be acting in a passive mode, wherein the tag works by modulating the field generated by the reader by drawing power from the reader device.

Is NFC Immune to Eavesdropping?

As NFC works on the principle of proximity, it is thought of being inherently secure. It is practically very difficult for hackers to intercept communication from such close quarters. However, this belief could be misleading as NFC is not entirely immune to eavesdropping, although the eavesdropper has to be in close proximity of the NFC enabled handset. Also, passive NFC tags are believed to be less susceptible to being eavesdropped as compared to their active counterparts. The potency of the eavesdropping threat is determined by antenna geometry of the eavesdropper as well as the target, distance between the eavesdropper and the target, as well as by the signal quality available to the eavesdropper. Philips, one of the developers of NFC also enlists data corruption, insertion and modification as less probable, but theoretically possible, vulnerabilities of NFC devices.

Key Players in the Market

Vendor landscape is the most accurate barometer of the market potential of a technology. On this count, mobile biometrics is on a sound footing. Considering that it is very much in the fledgling stage, it enjoys considerable interest, as evidenced in the significant number of companies foraying into it. Some of the salient participants are highlighted below:

- 3M Cogent supplies finger print and facial recognition systems for law enforcement, as well as commercial domains.
- Inside Secure provides modular solutions for fingerprint as well as swipebased authentication.
- Bayometric makes mobile fingerprint scanners that are present as a hardware attachment.

- Cross Match Technologies provides multimodal biometric mobile solutions, predominantly to the law enforcement agencies.
- CrucialTec's mobile fingerprint scanners are embedded in the home button itself; making authentication intuitive and convenient.
- Fulcrum Biometrics provides multimodal biometric applications for Android as well as iOS, including face, iris and fingerprint
- Iris ID is a pioneer in the development of a combined iris and facial recognition system.
