Abstracts

While the benefits of Software Defined Networking (SDN) and network virtualization are well known in the enterprise IT and data center world, both technologies also bring a hosts of benefits to the telecommunications service provider/carrier community.

Not only can SDN and network virtualization help address the explosive capacity demand of mobile traffic, but they can also reduce the CapEx and OpEx burden faced by service providers to handle this demand by diminishing reliance on expensive proprietary hardware platforms.

SDN and network virtualization solutions have been widely deployed in data center and enterprise environments, and many service provider deployments are already underway.

Network Functions Virtualization (NFV) is service provider led initiative aimed at virtualizing network components in a service provider network. While NFV is still a developing technology with its first set of specifications published in October 2013, many vendors have already developed commercial-grade solutions that align well with the NFV initiative.

Driven by the thriving ecosystem, SNS Research estimates that the SDN, NFV and network virtualization market will account for nearly \$4 Billion in 2014 alone. Despite barriers relating to standardization and co-existence with legacy networks, SNS Research estimates further growth at a CAGR of nearly 60% over the next 6 years.

This report presents an in-depth assessment of the global SDN, NFV and network virtualization market. In addition to covering underlying technology, key market drivers,

challenges, future roadmap, value chain analysis, use cases, deployment case studies, expert interviews, company profiles, product strategies and strategic recommendations, the report also presents comprehensive forecasts for the market from 2013 till 2020. Historical revenue figures for 2010 – 2012 are also presented. The forecasts and historical revenue figures are individually segmented for 3 individual submarkets, 2 user base categories, 7 use case categories, 6 geographical regions and 34 countries.

The report comes with an associated Excel datasheet covering quantitative data from all figures presented within the report.

Key Findings:

The report has the following key findings:

Driven by the thriving ecosystem, SNS Research estimates that the SDN, NFV and network virtualization market will account for nearly \$4 Billion in 2014 alone. SNS Research estimates further growth at a CAGR of nearly 60% over the next 6 years

Although network virtualization in the enterprise IT and data center domain has received significant attention in the past years, service provider network virtualization is still at a nascent stage

SDN and NFV empower a multitude of network functions to be implemented cost effectively in software, ranging from standard mobile IP Multimedia System (IMS) services to features such as Deep Packet Inspection (DPI)

By 2017 we expect to see significant price and gross margin erosion for traditional hardware-based network switching equipment driven by alternative software based solutions

By 2020 SNS Research estimates that SDN and NFV can enable service providers (both wireline and wireless) to save up to \$32 Billion in annual CapEx investments

Topics Covered:

The report covers the following topics:

The scope and implementation of SDN, NFV and network virtualization across the globe

SDN, NFV and network virtualization technology

Market drivers and key benefits of SDN, NFV and network virtualization

Challenges and inhibitors to the ecosystem

Standardization and regulatory initiatives

Use cases and application case studies of SDN and NFV

SDN and NFV deployment case studies

SDN and NFV induced service provider CapEx savings

Value chain analysis of the ecosystem and the recognition of key players in each segment of the value chain

Industry roadmap from 2014 till 2020

Key trends in the ecosystem; SDN and NFV's impact on the network infrastructure value chain, the stance of incumbent vendors towards SDN and NFV, impact on the proprietary hardware market and co-existence with legacy networks

Exclusive interview transcripts of 17 players in the ecosystem; Alvarion, Aricent, Arista Networks, Broadcomm, Connectem, ConteXtream, Extreme Networks, GENBAND, Mavenir, Netronome, Open Networking Foundation (ONF), Openwave Mobility, Pica8, Plexxi, Radisys, Spirent Communications and Tellabs

Profiles and strategies of 122 key players in the ecosystem

Strategic recommendations for silicon & server OEMs, network & mobile Infrastructure vendors, IT giants, pure-play SDN/NFV specialists, enterprises,

data center operators and service providers

Historical revenue figures and forecasts till 2020

Historical Revenue & Forecast Segmentation:

Market forecasts and historical revenue figures are provided for each of the following submarkets, user base and use case categories:

Submarkets

SDN Software & Hardware

Non-NFV Network Virtualization Software

NFV Software

SDN Submarkets

SDN Controller Hardware Appliances

SDN Controller Software

User Base Categories

Service Providers

Data Centers & Enterprises

Service Provider Use Case Categories

Radio Access Networks

Mobile Core, EPC, IMS & Services

OSS/BSS

Data Center

Mobile Backhaul

Wireline Fixed Access Networks

CPE/Home Environment

The following regional and country markets are also covered:

Regional Markets

Asia Pacific

Eastern Europe

Latin & Central America

Middle East & Africa

North America

Western Europe

Country Markets

Argentina, Australia, Brazil, Canada, China, Czech Republic, Denmark, Finland, France, Germany, India, Indonesia, Israel, Italy, Japan, Malaysia, Mexico, Norway, Pakistan, Philippines, Poland, Qatar, Russia, Saudi Arabia, Singapore, South Africa, South Korea, Spain, Sweden, Taiwan, Thailand, UAE, UK and USA

Additional forecasts are provided for:

SDN and NFV Induced Service Provider CapEx Savings by Region

Key Questions Answered:

The report provides answers to the following key questions:

What are the key market drivers and challenges for SDN, NFV and the wider network virtualization ecosystem?

How can SDN and NFV complement each other?

What are the key applications and use cases of SDN and NFV?

How is the SDN, NFV and network virtualization value chain structured and how will it evolve overtime?

What opportunities do SDN and NFV offer to silicon & server OEMs, network & mobile Infrastructure vendors, IT giants, pure-play SDN/NFV specialists, enterprises, data center operators and service providers and other players in the value chain?

What strategies should these players adopt to capitalize on the SDN and NFV opportunity?

How are SDN and NFV vendors positioning their product offerings?

How big is the SDN, NFV and network virtualization ecosystem, and how much revenue will it generate in 2020?

What particular submarkets does the ecosystem constitute?

What geographical regions, countries and submarkets offer the greatest growth potential for SDN and NFV investments?

Who are the key players in the SDN and NFV ecosystem and what are their strategies?

How will SDN and NFV impact the network infrastructure value chain?

Is there a ring leader in the SDN and NFV ecosystem?

How long will service providers continue to utilize proprietary hardware

platforms?

How can SDN and NFV help make the Voice over LTE (VoLTE) and Rich Communication Services (RCS) business case work?

How can software-defined Deep Packet Inspection (DPI) complement SDN functionality?

What level of CapEx savings can SDN and NFV facilitate for service providers in each region?

Contents

1 CHAPTER 1: INTRODUCTION

- 1.1 Executive Summary
- 1.2 Topics Covered
- 1.3 Historical Revenue & Forecast Segmentation
- 1.4 Key Questions Answered
- 1.5 Key Findings
- 1.6 Methodology
- 1.7 Target Audience
- 1.8 Companies & Organizations Mentioned

2 CHAPTER 2: AN OVERVIEW OF SDN. NFV & NETWORK VIRTUALIZATION

- 2.1 What is Network Virtualization?
- 2.2 What is Software Defined Networking (SDN)?
- 2.3 SDN Protocols
 - 2.3.1 OpenFlow
 - 2.3.2 Border Gateway Protocol Traffic engineering (BGP-TE)
 - 2.3.3 Path Computation Element Protocol (PCEP)
 - 2.3.4 Interface to the Routing System (I2RS)
 - 2.3.5 Virtual Extensible LAN (VxLAN)
 - 2.3.6 Application Layer Traffic Optimization (ALTO)
- 2.3.7 IETF Software Driven Networks
- 2.4 SDN Implementation Approaches
 - 2.4.1 Network Virtualization Approach
 - 2.4.2 Evolutionary Approach
- 2.4.3 The "Central Control" Approach
- 2.5 What is Network Functions Virtualization (NFV)?
- 2.6 NFV Enabling Technologies
- 2.6.1 Cloud Computing and Network Virtualization
- 2.6.2 Open Management and Control Protocols
- 2.6.3 Industry Standard High-Volume Servers
- 2.7 How SDN and NFV Differ from Each Other
 - 2.7.1 Similarities and Differences
 - 2.7.2 Can Both Technologies Complement Each Other?
- 2.7.3 How Are Vendors Positioning their Solutions?
- 2.8 Market Drivers

- 2.8.1 Leveraging Generic Low-cost Hardware
- 2.8.2 Multi-tenancy on Same Hardware
- 2.8.3 Reduced Power Consumption
- 2.8.4 Faster Time to Market (TTM)
- 2.8.5 Improved Operational Efficiency & Performance
- 2.8.6 Centralized Provisioning and Network Control
- 2.8.7 Ability to Launch New Services & Virtual Networks Quickly
- 2.8.8 Dynamic Scaling of Services
- 2.8.9 Opening the Door to Multi-vendor Interoperability
- 2.8.10 CapEx and OpEx Reduction
- 2.8.11 Fast Troubleshooting and Improved Diagnostics
- 2.8.12 Vendor Support
- 2.9 Market Barriers
 - 2.9.1 Lack of Standardization & Technology Maturity
 - 2.9.2 Uncertain Cost-Benefits Tradeoffs
 - 2.9.3 NFV May Slow/Delay Traffic
 - 2.9.4 Will Multi-vendor Interoperability Really Work?
 - 2.9.5 Co-Existence with Legacy Networks: Integration Challenges

3 CHAPTER 3: SDN/NFV USE CASE SCENARIOS AND DEPLOYMENT CASE STUDIES

- 3.1 Enterprise. Data Center & Generic Use Cases
 - 3.1.1 Network Virtualization
 - 3.1.2 Network Virtualization Case Study: Scalable Data Centers
 - 3.1.3 Tap Aggregation
 - 3.1.4 Dynamic WAN Re-Routing
 - 3.1.5 Network Exchange: Interconnecting Physical Networks
 - 3.1.6 Improved Traffic Engineering
 - 3.1.7 Converged Storage
- 3.2 Service Provider Use Cases
 - 3.2.1 Radio Access Network (RAN) Virtualization
 - 3.2.2 Cloud RAN
 - 3.2.3 Wireline Fixed Access Network Virtualization
 - 3.2.4 Evolved Packet Core (EPC)/Mobile Core Virtualization (Including IMS)
 - 3.2.5 Mobile Backhaul Virtualization
 - 3.2.6 CPE/Home Network Environment Virtualization
 - 3.2.7 Service Chaining
 - 3.2.8 SDN/NFV Infrastructure as a Service (IaaS)

- 3.2.9 Virtualization of Network Functions (VNF)
- 3.2.10 VNF Case Study: Deep Packet Inspection (DPI)
- 3.2.11 Virtual Network Function as a Service (VNFaaS)
- 3.2.12 Virtual Network Platform as a Service (VNPaaS)
- 3.2.13 Virtualization of CDNs
- 3.2.14 Bandwidth on Demand
- 3.2.15 Bandwidth on Demand Case Study: QoS Management for Video
- 3.2.16 Packet-Optical Integration
- 3.3 Service Provider Deployment Case Studies
 - 3.3.1 AT&T
 - 3.3.2 BT
 - 3.3.3 China Mobile
 - 3.3.4 Deutsche Telekom
 - 3.3.5 KDDI
 - 3.3.6 NTT Communications
 - 3.3.7 Portugal Telecom (PT) /Oi
 - 3.3.8 SK Telecom
 - 3.3.9 SoftBank
 - 3.3.10 Verizon
- 3.4 Enterprise & Data Center Deployment Case Studies
 - 3.4.1 Equinix
 - 3.4.2 Fidelity Investments
 - 3.4.3 Google
 - 3.4.4 Kanazawa University Hospital
 - 3.4.5 Nippon Express

4 CHAPTER 4: INDUSTRY ROADMAP AND VALUE CHAIN

- 4.1 The SDN. NFV & Network Virtualization Value Chain
 - 4.1.1 Silicon & Server OEMs
 - 4.1.2 Pure-play SDN/NFV Specialists
 - 4.1.3 Network Infrastructure Vendors
 - 4.1.4 IT Industry Giants
 - 4.1.5 Mobile Infrastructure Vendors
 - 4.1.6 BSS/OSS & Software Vendors
 - 4.1.7 Enterprises
 - 4.1.8 Service Providers
 - 4.1.9 Data Center Operators
- 4.2 The SDN. NFV & Network Virtualization Industry Roadmap: 2014 2020

4.2.1 Enterprise & Data Center SDN Rollouts: 2013 - 2014

4.2.2 NFV Trials and Vendor Consolidation: 2015 - 2017

4.2.3 Large Scale Proliferation of NFV and SDN in Service Provider Networks: 2018 - 2020

5 CHAPTER 5: STANDARDIZATION BODIES & ALLIANCES

- 5.1 Open Networking Foundation (ONF)
- 5.2 European Telecommunications Standards Institute (ETSI)
- 5.3 Cloud NFV
- 5.4 Internet Engineering Task Force (IETF)
- 5.5 Internet Research Task Force (IRTF)
- 5.6 ITU (International Telecommunications Union)
- 5.7 OpenDaylight (Linux Foundation)
- 5.8 OpenStack Foundation
- 5.9 Open Networking Research Center (ONRC) and ON.Lab
- 5.1 OpenContrail (Juniper Led)
- 5.11 CloudBand Ecosystem Program (Alcatel-Lucent Led)
- 5.12 Open Virtualization Alliance (OVA)
- 5.13 Object Management Group (OMG)
- 5.14 FlowForwarding

6 CHAPTER 6: EXPERT OPINION

- 6.1 Alvarion
- 6.2 Aricent
- 6.3 Arista Networks
- 6.4 Broadcom
- 6.5 Connectem
- 6.6 ConteXtream
- 6.7 Extreme Networks
- 6.8 GENBAND
- 6.9 Mavenir
- 6.1 Netronome
- 6.11 Open Networking Foundation (ONF)
- 6.12 Openwave Mobility
- 6.13 Pica8
- 6.14 Plexxi
- 6.15 Radisys

- 6.16 Spirent Communications
- 6.17 Tellabs

7 CHAPTER 7: COMPANY PROFILES

- 7.1 6WIND
- 7.2 A10 Networks
- 7.3 Accedian Networks
- 7.4 Active Broadband Networks
- 7.5 ADARA Networks
- 7.6 ADVA Optical Networking
- 7.7 Alcatel-Lucent/Nuage Networks
- 7.8 Amdocs
- 7.9 Alvarion
- 7.1 Argela (Turk Telekom Subsidiary)
- 7.11 Aricent
- 7.12 Arista Networks
- 7.13 Big Switch Networks
- 7.14 Broadcom
- 7.15 Brocade/Vyatta
- 7.16 Calsoft Labs/ALTEN Group
- 7.17 Centec Networks
- 7.18 Ceragon Networks
- 7.19 Check Point Software Technologies
- 7.2 Ciena
- 7.21 Cisco
- 7.22 Citrix
- 7.23 CohesiveFT
- 7.24 Colt
- 7.25 Connectem
- 7.26 ConteXtream
- 7.27 Coriant
- 7.28 Corsa Technology
- 7.29 Cyan
- 7.3 Dell/Force10
- 7.31 Dorado Software
- 7.32 Embrane
- 7.33 EnterpriseWeb
- 7.34 Ericsson

- 7.35 Extreme Networks
- 7.36 F5 Networks / LineRate Systems
- 7.37 Fortinet
- 7.38 Freescale
- 7.39 Fujitsu
- 7.4 GENBAND
- 7.41 Gigamon
- 7.42 GigaSpaces Technologies
- 7.43 GoGrid
- 7.44 Hewlett-Packard (HP)
- 7.45 Hitachi
- 7.46 Huawei
- 7.47 IBM
- 7.48 Infinera
- 7.49 Infoblox
- 7.5 Inocybe Technologies
- 7.51 Intel
- 7.52 Intune Networks
- 7.53 IP Infusion
- 7.54 Ixia
- 7.55 Juniper Networks
- 7.56 KEMP Technologies
- 7.57 Lancope
- 7.58 LSI
- 7.59 Luxoft/IBS Group
- 7.6 Lyatiss
- 7.61 Marvell
- 7.62 Mavenir
- 7.63 MediaTek
- 7.64 Mellanox Technologies
- 7.65 Metaswitch Networks
- 7.66 Microsoft
- 7.67 Midokura
- 7.68 NCL Communication (NCLC)
- 7.69 NEC
- 7.7 NetCracker Technology Corp (Part of NEC)
- 7.71 Netgear
- 7.72 Netronome
- 7.73 NetScout Systems

- 7.74 Netsocket
- 7.75 NetYCE
- 7.76 Nokia Solutions & Networks (NSN)
- 7.77 NoviFlow
- 7.78 Openet
- 7.79 Openwave Mobility
- 7.8 Optelian
- 7.81 Oracle/Tekelec
- 7.82 Orchestral Networks
- 7.83 Overture Networks
- 7.84 Pantheon
- 7.85 Pertino
- 7.86 Pica8
- 7.87 Plexxi
- 7.88 PLUMgrid
- 7.89 Pluribus Networks
- 7.9 Polatis
- 7.91 Procera Networks
- 7.92 Qosmos
- 7.93 Qualcomm
- 7.94 Rackspace
- 7.95 Radisys
- 7.96 Radware
- 7.97 Red Bend Software
- 7.98 Red Hat
- 7.99 RightScale
- 7.1 Riverbed Technology
- 7.101 Saisei Networks
- 7.102 Skyfire/Opera Software
- 7.103 Sonus Networks
- 7.104 Spirent Communications
- 7.105 StackIQ
- 7.106 Tail-f Systems
- 7.107 Tellabs
- 7.108 Texas Instruments (TI)
- 7.109 Tieto
- 7.11 Tilera
- 7.111 TorreyPoint
- 7.112 Transmode

7.113 UBIqube Solutions
7.114 vArmour Networks
7.115 Vello Systems
7.116 Versa Networks
7.117 Virtela
7.118 VMware/Nicira (EMC Subsidiary)
7.119 VSS Monitoring
7.12 Xpliant
7.121 Zhone Technologies
7.122 ZTE Corporation
7.123 Others

8 CHAPTER 8: MARKET ANALYSIS & FORECASTS

8.1 Global Outlook of the SDN. NFV & Network Virtualization Market Revenue: 2010 - 2020

- 8.2 Submarket Segmentation
- 8.3 SDN Submarket Revenue: 2010 2020
- 8.3.1 SDN Controller Hardware Appliances
- 8.3.2 SDN Controller Software
- 8.4 Non-NFV Network Virtualization Software Submarket Revenue: 2010 2020
- 8.5 NFV Software Submarket Revenue: 2010 2020
- 8.6 User Base Segmentation
- 8.7 Service Provider SDN & NFV Revenue: 2010 2020
 - 8.7.1 Service Provider SDN
 - 8.7.2 Service Provider NFV
- 8.8 Data Center & Enterprise SDN & Network Virtualization Revenue: 2010 2020
 - 8.8.1 Data Center & Enterprise SDN
- 8.8.2 Data Center & Enterprise Network Virtualization
- 8.9 Functional Area Segmentation for Service Provider Deployments
 - 8.9.1 Radio Access Networks
 - 8.9.2 Mobile Core. EPC & IMS Services
 - 8.9.3 OSS/BSS
 - 8.9.4 Service Provider Data Center
 - 8.9.5 Mobile Backhaul
 - 8.9.6 Wireline Fixed Access Networks
 - 8.9.7 CPE/Home Environment
- 8.1 Regional Outlook
- 8.11 Asia Pacific SDN. NFV & Network Virtualization Revenue: 2010 2020

- 8.11.1 Country Level Segmentation
- 8.11.2 Australia
- 8.11.3 China
- 8.11.4 India
- 8.11.5 Japan
- 8.11.6 South Korea
- 8.11.7 Pakistan
- 8.11.8 Thailand
- 8.11.9 Indonesia
- 8.11.10 Malaysia
- 8.11.11 Taiwan
- 8.11.12 Philippines
- 8.11.13 Singapore
- 8.11.14 Rest of Asia Pacific
- 8.12 Eastern Europe SDN. NFV & Network Virtualization Revenue: 2010 2020
 - 8.12.1 Country Level Segmentation
 - 8.12.2 Czech Republic
 - 8.12.3 Poland
 - 8.12.4 Russia
 - 8.12.5 Rest of Eastern Europe

8.13 Latin & Central America SDN. NFV & Network Virtualization Revenue: 2010 - 2020

- 8.13.1 Country Level Segmentation
- 8.13.2 Argentina
- 8.13.3 Brazil
- 8.13.4 Mexico
- 8.13.5 Rest of Latin & Central America

8.14 Middle East & Africa SDN. NFV & Network Virtualization Revenue: 2010 - 2020

- 8.14.1 Country Level Segmentation
- 8.14.2 South Africa
- 8.14.3 UAE
- 8.14.4 Qatar
- 8.14.5 Saudi Arabia
- 8.14.6 Israel
- 8.14.7 Rest of the Middle East & Africa
- 8.15 North America SDN. NFV & Network Virtualization Revenue: 2010 2020
 - 8.15.1 Country Level Segmentation
 - 8.15.2 USA
 - 8.15.3 Canada
- 8.16 Western Europe SDN. NFV & Network Virtualization Revenue: 2010 2020

8.16.1 Country Level Segmentation
8.16.2 Denmark
8.16.3 Finland
8.16.4 France
8.16.5 Germany
8.16.6 Italy
8.16.7 Spain
8.16.8 Sweden
8.16.9 Norway
8.16.10 UK
8.16.11 Rest of Western Europe

9 CHAPTER 9: CONCLUSION & STRATEGIC RECOMMENDATIONS

- 9.1 Will SDN & NFV Disrupt the Network Infrastructure Value Chain?
- 9.2 Is There a Ring Leader in the SDN & NFV Ecosystem?
- 9.3 SDN & NFV: Building the Mobile Cloud
- 9.4 Buyers Will Maintain Focus on Business Agility & CapEx Reduction
- 9.5 Avoiding the Proprietary Trap
- 9.6 Will Service Providers Continue to Utilize Proprietary Hardware Platforms?
- 9.7 Making the VoLTE and RCS Business Case Work
- 9.8 How Much CapEx Can Service Providers Save with SDN & NFV Investments?
- 9.9 Strategic Recommendations
 - 9.9.1 Recommendations for Silicon & Server OEMs
 - 9.9.2 Recommendations for Network & Mobile Infrastructure Vendors & IT Giants
 - 9.9.3 Recommendations for Pure-play SDN/NFV Specialists
 - 9.9.4 Recommendations for Enterprises and Data Center Operators
 - 9.9.5 Recommendations for Service Providers

About

Path Computation Element Protocol (PCEP)

Path Computation Element Protocol (PCEP), a relatively old Internet Engineering Task Force (IETF) standard, is a visibility and control protocol that works in MPLS networks, and partially removes the control plane from head-end routers to define network paths. Although PCE has not witnessed the same level of publicity or support as OpenFlow in the early years of SDN, it is likely to play an important role in emerging SDN architectures, especially in service provider networks.

Service providers have found PCE particularly attractive because upgrading entire MPLS networks would be high expensive and disruptive. A standard OpenFlow based SDN implementation requires replicating all of the logic of an MPLS-enabled router in the OpenFlow controller. On the other hand, PCE requires upgrading only head-end routers.

Interface to the Routing System (I2RS)

The IETF Interface to Routing System (I2RS) working group was created in November 2012 with the goal of developing a set of use cases and a basic architecture to support an interface to the routing system. The term "routing system" describes a hardware device, a virtual router or any software that provides routing functions.

IBM

IBM is a multinational technology and consulting corporation, with headquarters in New York, USA. IBM manufactures and markets computer hardware and software, and offers infrastructure, hosting and consulting services in areas ranging from mainframe computers to nanotechnology.

In Q4'2012, IBM unveiled its SDN controller application, the "System Networking Programmable Network Controller" which that runs on a Linux-based platform to provide SDN capabilities based on the OpenFlow standard.

In Q1'2013, IBM announced a new software solution that provides scalable overlays via SDN technology based on IBM's DOVE (Distributed Overlay Virtual Ethernet) architecture. Replacing the DOVE name, IBM's Software Defined Network for Virtual

Environments (SDN VE) is a virtual overlay network solution that is supposed to provide for faster provisioning and more scalable virtual networks. IBM SDN VE uses a modified version of VxLAN as the overlay encapsulation, allowing for up to 16 Million distinct networks.

During the same quarter, IBM announced its support for the NFV initiative, while marketing its "PureFlex" platform.
