Drivers: Increasing applications in cosmeceutical and personal care products

Coconut oil is use in cosmetics, as a moisturizer, and in soaps. Traditionally, coconut oil was used for treating illnesses and infections, promoting the growth of strong bones, healing wounds, and protecting the skin against. It has smoothing properties and textures so used in body butter, soaps, and salves. Coconut oil has excellent emollience to dry, itchy skin, and hair, suitable for sensitive, inflamed, and irritated skin.

Challenges: Irregularity in the supply of raw materials

Coconut oil is produced from copra and fresh coconut meat. Being a naturally produced fruit in farms, coconut production is prone to diseases and floods, which decrease production. This could negatively impact the supply of copra and fresh coconut meat required to produce coconut oil. Studies have proved that coconut oil increases blood cholesterol, including harmful LDL, triglycerides. Due to its cholesterol-raising effects were comparable to other saturated fats; the oil should not be viewed as a heart-healthy food and should be limited in the diet.

Opportunities: Potential application as bio fuel

Bio fuel has similar properties to conventional diesel fuel. Coconut oil exhaust contains far less harmful emissions than that of conventional diesel exhaust. In Pacific countries coconut oil is used in transport and electricity generation. The adaptation of biofuel

produced from coconut oil in diverse countries presents abundant opportunities for the coconut oil market.
