AUTO-INJECTORS Introduction

“Auto-Injector” is a medical device in the form of pen used to transfer dose of a particular drug medication. Generally these kinds of tools are used for serious allergic reaction that is anaphylaxis. They are available in the form of prefilled & fillable auto-injectors. Auto injectors are easy to use and are intended for self –administration by patients, or can be administered by untrained personnel. These injectors were initially designed to overcome the hesitation associated with self-administration of the needle-

based drug delivery device. Currently companies are trying to develop plastic based auto injectors to prevent unnecessary contamination.
