Bevacizumab (Biosimilar) Introduction

“Bevacizumab (Biosimilar)” is a cancer treatment drug known by brand name Avastin. It is a vascular endothelial growth factor directed antibody. Bevacizumab mainly targets a cancer cell protein known as vascular endothelial growth factor (VEGF). This protein helps cancers to grow blood vessels, so they can get food and oxygen from the blood. All cancers need a blood supply to be able to survive and grow. Bevacizumab blocks this protein and stops the cancer from growing blood vessels, so it is starved and can't grow. Treatments that interfere with the development of a blood supply are called anti-angiogenesis treatments.
