The Global Fresh Food Packaging market bolstering market growth due to rising concerns for hygiene in food packaging

The global fresh food packaging market has the potential to grow by USD 118 billion with a potential CAGR of 4% in the forecast period from 2021-2028. The bolstering demand for fresh food packaging continues to grow with population growth and the development of retail companies. These retail stores focus on reducing costs and extending shelf life.

Moreover, long-distance transportation usually reduces the freshness and hygiene of the food. Thus, the technological advancement in the food industry and the use of eco-friendly material in packaging will help in increasing the shelf life and freshness of the food.

With the increasing trend of global urbanization, the need for packaged food has bolstered the market of the food industry. Also, to reduce the wastage of food, fresh

food packaging is propelling the market share and helps in preventing the spoiling of food. Additionally, packaged food requires to select technology for different protective gases to replace the air around the food according to different food types.
