Glucose Meter Introduction

“Glucose Meter” is a small medical portable device for determining the approximate concentration of glucose in the blood. In case of diabetes mellitus or hyperglycemia it is used generally at home for monitoring blood glucose.

Small drop of blood, obtained by pricking the skin with a lancet, is placed on a disposable test strip that the meter reads and uses to calculate the blood glucose level. The meter then displays the level in units of mg/dl or mmol/l. The benefits include a reduction in the occurrence rate and severity of long-term complications from hyperglycemia as well as a reduction in the short-term, potentially life-threatening complications of hypoglycemia.
