Abstracts

The Global Oncology Informatics market is bolstering the growth owing to technological advancement and the need for reducing medical cost. The global oncology informatics market has the potential to grow with USD 8.24 billion with propelling CAGR in the forecast period from 2020-2027. Factors driving the market demand for oncology informatics are increasing cardiovascular diseases, increases medical treatment costs, and moving technology is driving the healthcare industry.

Cancer treatment is a medical field that requires the integration of large amounts of data in the decision-making process. Data integration faces many challenges, including risk assessment, tumor staging, and coordination among specialists in the team.

Therefore, in the coming years, computer analysis and modeling tools can be used to integrate data in multiple formats provided by high-throughput technologies (such as

genomics, proteomics) to avoid overtreatment and achieve personalized disease management.

Moreover, the comparison of multiple data sources in the clinical workflow can improve the accuracy of diagnosis and treatment and optimize cost-effectiveness. Oncology informatics helps in advancing the development of cardiovascular and cancer medicine requires intelligent IT tools and interdisciplinary data processing strategies.
