### **REPORT DESCRIPTION**

“Silica Flour” is a grind form of silica dioxide with the highest 98% silica content. It is obtained in the form of raw material from natural sources washed, scrubbed & hydraulically sized using variation in the size of sieve to obtain various range of silica flour mesh. The grinding range for silica dioxide crystalline to silica flour start from 50 mesh & end up with 550 mesh. Size of silica mesh varies depending upon the application industries, as in fiberglass, oil well cementing & manufacturing of sodium silicate size range of 100 mesh to 200 mesh & 200 mesh to 350 mesh is generally considered. Silica Flour market size for (2017-18) is \*\*6.69 Million USD, with a CAGR of \*\*% for the session 2014-2017 & it is forecasted to grow with a CAGR of \*\*% during the session of 2018-2023.

The product is used as a rough substance in paints, toothpaste, skin products, and cleansers and as filler for pharmaceutical products. The major market share application of silica flour is oil well cementing industry to provide permeability & strength, growth enhancement in the crude oil price indirectly leads to increase this segment of silica flour. Silica flour is also use as a raw material in the manufacturing of Sodium silicate which is next substantial application for silica flour. It is used as zeolites, chemicals, deflocculates, catalyst bases, anticorrosive, coagulant aids, binders, cement,

detergents, and adhesives in industries. Various functional characteristics and properties of soluble silicates are used economically and efficiently to solve wide problems in chemical and industrial processes. The positive outlook of all these industries in future will foster the Silica Flour market growth. The major disadvantage in the use of silica flour is silicosis which is caused by inhalation of very fine silica particle commonly known as respirable crystalline silica, it is a kind of lung disease which is incurable, leads to major disabilities & in some cases death also. In future may be it work as constrain in the market.

This report represents the global and regional analysis of silica flour in terms of application (fiberglass, sodium silicate, reinforcing filler, ceramic frits and glaze, cultured marble, foundry work, glass and clay production & oil well cement) wise segmentation, market size & market growth (in terms of value & volume) trends including forecasting upto 5 years.
