#### **Titanium Dioxide Introduction**

“Titanium”, the ninth most basic component in the Earth’s outside layer, is a metal commonly found in plants and animals. Titanium naturally interacts with oxygen to form titanium oxides, commonly found in ores, minerals, sands and soils. Titanium dioxide one of the whitest material on the earth is a naturally occurring oxide of titanium in three forms Anatase, Rutile & Brookite. It has the highest refractive index of all material till found by man including the diamond.

Pure titanium dioxide is a fine, white powder that provides a bright, white pigment. Titanium dioxide has been used for a century in a range of industrial and consumer products, including coatings, adhesives, paper, paints, plastics and rubber, printing inks,

coated fabrics and textiles, as well as ceramics, cosmetics, soap, water treatment agents, pharmaceuticals, food colorants and catalysts. On the other hand Environmental regulations such as carcinogenic properties and volatile prices of raw materials are the key factors which can restrain the global titanium dioxide market growth in forecasted period.
