Iron Chloride Introduction

“Iron Chloride” is classified under two main categories (ferric chloride FeCl_3 and ferrous chloride FeCl_2). There are number of iron chloride application but the major part falls under Water & Sewage treatment industry as trend of developing economy market of iron chloride tends to increase.

Ferric Chloride colour varies with change in viewing angle or position by reflected light the crystals appear dark green, but by transmitted light they appear purple-red. When Ferric Chloride is dissolved in water it undergoes hydrolysis & exothermic reaction take place which leads to brown acidic & corrosive solution which is used in sewage treatment & drinking water production as flocculant. It is also used in PBC industry as catalyst.

Ferrous Chloride is a powder available in white to off white colour range. In contact with water it crystallizes as greenish tetrahydrate. It is most commonly used in laboratories.
