Magnesium Oxide Introduction

“Magnesium Oxide” is white crystalline solid mineral also known as magnesia a hygroscopic compound produced by electrolysis. It is a versatile alkaline-earth metal oxide present in a variety of applications across a diverse set of industries. In presence of water it forms Magnesium Hydroxide reverse can be done by heating it to separate moisture. Calcination at different temperature leads to production of different reactivity magnesium oxide. Due to lower solubility with water it is used as an antacid & also in many non-medical applications. High temperature stability makes it suitable for refractory industry. Due to its relatively high alkalinity nature, it is also used in wastewater treatment processes. Magnesium oxide is also used in animal feed industry

for magnesium nutrition which leads to drive growth of the global magnesium oxide market.
