Silver Nitrate Introduction

“Silver Nitrate” is a colorless or white crystalline solid becoming black on exposure to light or organic material. It is silver salt raw material. Due to its versatile properties (stability to light, solubility in water and non-hygroscopic nature) silver nitrate has competitive advantage of being the least expensive of the silver salts, making the silver nitrate market lucrative. It is used as photographic emulsions and also as an agent to remove copper oxide fire scale from silver articles. Silver nitrate plays an important role as an antiseptic, disinfectant, in glass industry it functions as coating agent which

provides shiny mirrors. A major part of silver nitrate among all application consumed in the production of silver nitrates compounds. In pharmaceutical industry it is used as an anti-infective agent in treating wounds & burn on skin.
