Sodium Chloride Introduction

“Sodium Chloride” is a white crystalline solid commonly known as common salt, table salt or halite, is an ionic compound with the chemical formula NaCl, representing a 1:1 ratio of sodium and chloride ions. It is one of the most abundant minerals on Earth and an essential nutrient for many animals and plants. The commercial used grade of sodium chloride contain minute amount of calcium & magnesium chlorides, which absorb moisture from environment & leads to caking. Sodium chloride is used as a preservative to prevent food from Spoilage, also in fermenting processes in food industry. Icy sidewalks and roadways are also generally de-iced by rock salt, sodium chloride also play an important role in Hospitals to alleviate dehydration in patients by supplying sodium chloride solution intravenously. Sodium chloride in major percentage is

used in industrial production setting to produce other products like plastic, paper & pulp etc.
