Executive summary

The growth of the Indian telecom sector has also supported the rise of the broadband market in the country. The Indian broadband industry's growth has been supported by the various initiatives undertaken by the government to enhance internet penetration across the country. The introduction of the Wimax and 3G services are expected to boost the growth of the industry. However, the sector has been unable to maximize its potential as the country struggles with the lack of infrastructure for fixed broadband. Many network expansions and upgrades are in progress to help the country compete with other comparable Asia-Pacific broadband markets.
