Abstracts

Acne is a common skin condition causing pimples and other abnormalities on the face and upper torso. Acne is caused by an interaction between hormones, skin oils, and bacteria, which results in inflammation of hair follicles (the pores in the skin where hair grows). The global acne medication market is poised to grow by US\$ 2,184 million during 2021-2027, progressing at a CAGR of 5.2% during the forecast period, according to data and analytics company StrategyHelix. Increasing sedentary lifestyle and unhealthy food habits, increasing prevalence of acne and facial skin diseases, rise in adoption of skin care products, growing acne cases in geriatric population are expected to boost the market growth in the coming years.

The report provides up-to-date market size data for period 2017-2020 and forecast to 2027 covering key market aspects like sales value for acne medication. The global acne medication market is segmented on the basis of therapeutic class, route of administration, type, and region.
