Abstracts

An orphan drug is a medicine for the diagnosis, prevention or treatment of a life-threatening or chronically debilitating condition that is rare or where the medicine is unlikely to generate sufficient profit to justify research and development costs. They are orphans because the pharmaceutical industry has little interest under normal market conditions in developing and marketing drugs intended for only a small number of patients suffering from very rare conditions. The global orphan drugs market is poised to grow by US\$ 68,701 million from 2021 to 2027, registering a CAGR of 5.5% during the forecast period, according to StrategyHelix. Availability of exclusivity for orphan drugs, rising prevalence of rare diseases, favorable government policies are expected to boost the market growth in the coming years.
