Abstracts

Sunscreen is a photoprotective topical product for the skin that absorbs or reflects UV radiation and thus helps protect against sunburn and most importantly prevent skin cancer. There are two types of sunscreen: chemical sunscreens and physical sunscreens. Chemical sunscreens are absorbers of UV rays as they attempt to enter the skin. Physical sunscreens deflect damaging UV rays away from the skin. According to a report by StrategyHelix, the global sunscreen ingredients market is set to increase by US\$ 214 million during 2021-2027, growing at a CAGR of 4.2% during the forecast period.
