Abstracts

Ultraviolet (UV) water purifiers are the most effective technology for disinfecting bacteria from water. UV water purifiers utilize UV technology to purify water and eliminate numerous microbes, bacteria and viruses present in water. The global UV water purifier market in terms of revenue is set to grow by US\$ 7 billion during 2021-2027, growing at a compound annual growth rate (CAGR) of 10.1% during the forecast period, according to data and analytics company StrategyHelix. North America is the most significant revenue contributor in the global uv water purifier market. The region is expected to witness significant developments in the uv water purifier market. Increase in disposable income of customers, rise in incidence of waterborne diseases, rapid industrial development leading to water pollution, and improvement of health are the prime drivers of the global water purifier market. Moreover, developing nations offer lucrative opportunities for market players, due to the presence of large population base and heavy water pollution.
