According to Statistics MRC, the global 3D Printing Gases market is accounted for \$24.65 million in 2015 and is expected to reach \$57.46 million by 2022 growing at a CAGR of 12.85% from 2015 to 2022. Rapidly growing 3D printing/additive manufacturing market is the primary factor favouring the market growth. Furthermore, rising usage of 3D printing gases in healthcare, manufacturing, automobiles, consumer goods, energy industries, aerospace and defense is the major factor driving the global 3D printing gases market. However, factors such as regulatory restrictions and lack of standardized equipment are limiting the market growth.

By technology, laser sintering segment is expected to witness high growth rate during the forecast period. Argon gas segment is likely to acquire the largest market share during the forecast period and gas mixtures segment is expected to grow at the highest CAGR. Cylinder & packaged gas distribution segment dominated the global 3D printing gases market due to its wide usage by suppliers. Design & Manufacturing industries have the largest share in end users market for 3D Printing Gases. North America is anticipated to be the largest market while, Europe is projected to grow at a faster pace. The growth of this region is attributed to the increasing demand for 3D Printing Gases in healthcare, design & manufacturing and automotive industries.
