Abstracts

According to Statistics MRC, the Global Acaricides Market is accounted for \$289.40 million in 2020 and is expected to reach \$504.73 million by 2028 growing at a CAGR of 7.2% during the forecast period. Increasing demand for meat, dairy products, and crops and development in the crop protection industry is driving the market growth. However, the rising cost may hamper the market growth.

Acaricides are pesticides that help to maintain the health of the crops and animals and protect them from diseases across agriculture and animal husbandry.

Based on type, the organophosphorus compounds segment is going to have lucrative growth during the forecast period. They are mainly used in pest control. Some of its compounds are highly effective insecticides. These chemicals account for a large amount of all insecticides used in different countries, including those used in food crops.

By geography, North America is going to have high growth during the forecast period due to the increasing usage of crop protection chemicals to control the spread of tick and mite-borne diseases. The increase in demand for animal feed and crops is the key factor of this sector. The North American region is one of the major consumers of acaricides. It is also one of the fastest-growing markets.

Some of the key players profiled in the Acaricides include Arysta Lifescience, BASF SE, Bayer AG, Chemtura Corporation, Dow Chemical Company, Dupont, FMC Corporation, Indofil Industries Limited, Merck & Co., Inc., Nissan Chemical Industries, Ltd., PI Industries, Syngenta AG, and Tata Chemicals Limited.
