Abstracts

According to Statistics MRC, the Global Agricultural Coatings Market is accounted for \$3.45 billion in 2020 and is expected to reach \$7.55 billion by 2028 growing at a CAGR of 10.3% during the forecast period. Favorable government policies and regulations and an increase in the seed replacement rate are the major factors driving the market growth. However, the high costs involved in the agricultural coating process are hampering the market growth.

Agricultural Coatings provide chemical resistance to wear and corrosion for the industrial tools and machines that are used in the agriculture industry. It offers economic, environmental and production benefits. It can also be used on smaller mechanical components and parts that require a protective barrier for a prolonged lifespan.

Based on the coating type, the polymers segment is going to have lucrative growth during the forecast period. Polymers provide better shelf life as a result of less settling out of components and require less water, resulting in ease of handling and reduced storage losses.

By geography, North America is going to have high growth during the forecast period due to the increasing demand for disease-resistant and high-yielding crops from domestic markets. In North America, agriculture is developed with an integrated system of supporting agribusinesses.

Some of the key players profiled in the Agricultural Coatings Market include BASF SE, Aakash Chemicals, Arkema, Bayer AG, Clariant Technologies, Croda International Plc, Deltachem, Dorfketal, Germains Seed Technology, Israel Chemicals Ltd, Milliken

Chemical, Novochem Group , Precision Laboratories, Pursell Agri-tech, and Sensient Technologies.
