According to Statistics MRC, the Global Agricultural Sprayers Market is accounted for \$2.20 billion in 2020 and is expected to reach \$4.22 billion by 2028 growing at a CAGR of 8.5% during the forecast period. The government support toward modern agricultural techniques, increase in focus on farm efficiency and productivity and increase in farm sizes are the major factors driving the market growth. However, high capital investment on modern agricultural equipment is restraining the market growth.

In agriculture, a sprayer is a piece of equipment that is used to apply herbicides, pesticides, and fertilizers on agricultural crops. They can be electric, fuel-based, and handheld sprayers.

Based on power source, the fuel-based segment is estimated to have a lucrative growth, due to their strong engine, capacity to cover large farm areas, and reduced human effort, but they also demand proper maintenance. For their running, all engines need fuel, air, and a proper system of ignition. Fuel-based sprayers are used for high volume spraying.

By geography, Asia Pacific is going to have high growth during forecast period. Agriculture is the major occupation in the Asia Pacific region; it has a huge regional presence, including countries like China, India, Australia, Japan, and the Rest of Asia Pacific. Thus, the increasing agricultural practices, use of advanced technological farm equipment, and requirement of high-quality agricultural produce are the reason for increase in market in this region.
