Abstracts

According to Statistics MRC, the Global Agrochemicals Market is accounted for \$212.72 billion in 2020 and is expected to reach \$323.98 billion by 2028 growing at a CAGR of 5.4% during the forecast period. Increased reliance on the use of fertilizers for productivity enhancement, rising literacy rate of farmers coupled with increasing awareness towards pesticides usage in major crop-producing countries is driving the market growth. However, stringent regulations governing the production and marketing of agrochemical products are hampering the growth of the market.

Agrochemicals are the chemical substances which are used in the agricultural farmland to increase the deficiency of nutrient in the field or crop. Agrochemicals are used for preventing the deterioration of crops from insects and pest infestation and disease. Agrochemicals improve the quantity and the quality of farm products.

Based on the application, the crop based segment is going to have lucrative growth during the forecast period owing to aggressive advertisements and branding from multinational players, which, in turn, has increased the penetration of agrochemicals. Various essential mineral supplementations through fertilizers increase rice crop yield and nutrient content in harvested grains. By geography, Asia Pacific is going to have high growth during the forecast period due to the urbanization, rapid income growth, and increasing need for food crops in the region has fueled the use of pesticides to enhance crop yield. The use of pesticides is becoming a common practice in India, China, and other less-developed countries in the region, leading to growth in areas where there had previously been very little or no pesticide usage.

Some of the key players profiled in the Agrochemicals Market include Yara International, UPL, Syngenta, Sumitomo Chemical, Nufarm, K+S Group, ICL Group Ltd, Compass Minerals, Bayer, BASF and Adama Ltd.
