Growing application of ISR by government agencies, increased acquisitions of UAVs, rising integration of Android and iOS-based devices are some of the factors fueling the market growth. However, complexity of data sets and issues associated with maritime surveillance radar are hampering the market growth.

Airborne ISR is used for assembling information about the intruder's strength, movements and activities. It is used to perform the tasks of identification, recording, capturing, analyzing and reporting. All kinds of Information are collected with the help of the ISR systems, which are then performed by secret intelligence.

Based on Platform Type, sea segment holds the significant market share during the forecast period. Due to these Unmanned vehicles are reliable, smaller in size, and cost-effective. It also afford on-board sensors such as LASER, SAR, IMU, and GPS. By geography, North America holds the largest market share during the forecast period. The United States Air Force currently flies MQ-9 Reaper, MQ-1 Predator, and RQ-4 Global Hawk drones remotely using US pilots to navigate from a ground control station.
