## Abstracts

According to Statistics MRC, the Global Aircraft Nacelle and Thrust Reverser Market is accounted for \$2.03 billion in 2017 and is expected to reach \$3.68 billion by 2026 growing at a CAGR of 6.8% during the forecast period. Some of the key factors influencing the market growth include growing number of aircraft orders, rising demand for fuel-efficient and noise-reducing nacelles and reject in the price of composite materials. However, backlog in existing aircraft deliveries are restricting the market growth.

Aircraft nacelles are one of the important contributors to high aircraft weight and drag. The new low-drag lightweight nacelles add to rising fuel efficiency of aircraft and thus demand for such nacelle and thrust reversers is increasing. In addition, Thrust reversal refers to the temporary diversion of an aircraft engine's thrust so that it is directed forward, rather than backward. It works in opposition to the forward travel of the aircraft, facilitating deceleration.

Based on engine type, the turbofan segment is anticipated to witness the highest growth during the forecast period. In the aviation industry, almost all the aircraft used in business and provincial travel work on the belief of turbofan based aircraft forward motion owing to which the rising demand for business and provincial airliners. By Geography, The North America region is expected to grow at the largest market share during the forecast period, due to increasing aircraft upgrades and acquisition of business jets and high demand for new aircraft and replacement of aging fleets.

Some of the key players in global aircraft nacelle and thrust reverser market are Triumph Group, Woodward, Inc., Bombardier, Spirit Aerosystems Inc., United Technologies Corporation, Nordam, Safran, GKN, Ducommun, Leonardo S.P.A.,
