Abstracts

According to Statistics MRC, the Global Aircraft Pumps Market is accounted for \$3.08 billion in 2017 and is expected to reach \$6.2 billion by 2026 growing at a CAGR of 8.0% during the forecast period. Increasing aircraft orders, shorter replacement cycles of aircraft pumps and rise in air passenger traffic are some of the key driving factors for the market growth. However, existing backlogs in aircraft deliveries and increasing trend towards electrification in all non-propulsive systems are restraining the expansion of the aircraft pumps market. Moreover, increasing acceptance of UAVS in military applications would create innovative opportunities for players in this market.

By pressure, the 3000 PSI segment is expected to drive the growth of the market through the forecasted period due to the expansion of commercial aircraft orders and rising maintenance, repairs, operations (MRO) services in Asia Pacific region. By technology, the engine driven segment is expected to lead the aircraft pumps market during the forecast period, as each airplane needs a chief oil pump for liquid release for usual liquid pumping operations and it also need to be replaced at normal intervals of time.

By geography, Asia Pacific region is the fastest growing market owing to the rise in the number of flight hours and air passenger traffic. North American region accounted for the largest share of the aircraft pumps market and is likely to have growing military and commercial aircraft deliveries.

Some of the key players profiled in the Aircraft Pumps Market include Parker Hannifin, Crane Aerospace, Woodward, Cascon, Crissair, Aero Space Controls Corporation, Tempest Plus, Aerocontrollex, Weldon, Zodiac Aerospace, Triumph Group, Eaton and Honeywell International.
