Abstracts

According to Statistics MRC, the Global Anesthesia Vaporizers market is expected to grow with a CAGR of 7.1% from 2016 to 2023. Some of the major factors that are fostering the market growth includes rising number of surgical procedures, increasing count of specialty hospitals, and attracting end-users through involvement in medical exhibitions. Furthermore, increasing old generation and high healthcare expenditure are some of the significant opportunities for the market growth. On the contrary, lack of professionals with required skills and high cost of open surgeries globally especially in the backward economies like South America and Africa are restraining the market.

Anesthesia is widely used during surgical procedures to bring unconsciousness to patients. These devices are used to convert liquid inhalation agents into vapors. This vapor and oxygen are collectively delivered to the patient via inhalation route, primarily during pre-surgical procedures. By end user, hospitals and clinics segment accounted for highest revenue owing to rising number of entries to hospitals for surgical care.

By geography, North America commanded the largest market share due to increasing surgeries which are led by elevated awareness amongst surgeons about the benefits of anesthesia devices, rising competition, advancements in technology are some factors favouring the market. Moreover, Asia Pacific is the fastest growing market during the forecast period due to the rising awareness on health care, increase in the disposable income and favorable reimbursement policies are fostering the market.

Some of the key players in global Anesthesia Vaporizers include Spacelabs Healthcare, SkyePharma Inc., Piramal Healthcare, Penlon Limited, Oricare Inc., OES Medical, NorVap, Beijing Siriusmed Medical Device, Medtronic plc, Meditec International England, GE Healthcare, Drägerwerk AG & Co. KGaA, CM-CC, Beijing Yi Shiheng

Electronic Technology and Beijing Vanbonmed.

Products Covered:
