Abstracts

“According to Statistics MRC, the Global Antifungal Drugs Market is accounted for \$13.2 billion in 2016 and is expected to reach \$18.2 billion by 2022 growing at a CAGR of 5.4% during the forecast period”. Factors such as rising government and corporate financial support in the industry, growing awareness of fungal infections and increase in disposable income are fueling the market growth. However, generic competition and huge diffusion of conventional drugs used for the treatment of fungal infections are hampering the market growth. Cost of drugs and their effectiveness in treatment are major challenges in the market.

Dermatophytosis segment is anticipated to hold the largest market share during the forecast period due to increasing prevalence of skin infections in children. Candidiasis segment is expected to grow at the highest CAGR during the forecast period. North America is anticipated to account for the largest market share owing to the huge patient awareness levels and increased R&D spending pertaining to new drug development. Asia Pacific is expected to grow at the highest CAGR during the forecast period owing to rising awareness towards personal safety and health care.

Some of the key players in Antifungal Drugs market include GlaxoSmithKline, Agilent Technologies, Inc., Kramer Laboratories, Bayer Healthcare, Abbott Laboratories, Novartis, Glenmark Pharmaceuticals Ltd, Merck & Co.
